It renders any article which has be and enfticieatly to resist the action of a common file. It also makes it cayable of receising a high degree of polish, it consists in heating the piece of fronware to be case-hardened in cuntact with mone bubstance containing carbon (side as boue-dust, yellow prossiate of potash, dic.
Ca'sele, $a$. [Frow fat. caseus. cheese.] Pertainiog cherne, or to the acitl obtained from it.
Ca'selne $n$. (Chem.) The nitrogedous principle of milh Whach forme a large portion of the enrd. $C$., in th double form, appears to be preserved in solution by a small quantity of atkur contaioed io the milk. $n$ the enlphuric arid to the milk, which precipitates in the foron of curd. The curd is well wabhed and diesolved in carbonate of rotla, aud albwed to stand for tweut four houre, to let the ofl rise to the surface. This is skimmed off and the caseine precipitated by an acio. Th. process is repented asecond time, und the coagnlum is digested with sicohol and ether, and dried. With all throke precautions the C. atill coutains sonac salive matter, which cannot he removed. It id also obtained by congulating the mitk with hydrochloricacid. The curd is washed with dilute hydrochloric acid, nod finally is elowly dissolved by digestion at $110^{\circ}$, with a large is athowly dissolved of water. The solution is filtered, coagulated quith carlonate of anmonia, the congulum washed with water, ether, and alcolob, nud finally dried. Coagulated $C$ is readily dissolved by the alkalies and alkaline carbonatus. C alno unites with earthy carbonates, und forms insoluble componda. A very tenacions lute is mude by mixing poor cheese with alaked lime. The mast remarkable form of coagnlation is that produced by the action of the eceretion from the mucous membrane of the stonanch. This substance is called renstomich of the calr, sultid and drial. When a solution of rennet is mived with milk, in dense coagulun is formed lemsing the whey behinet, usa thin, clear strawcolored liquid. The action of reanet in this instance remains unexplainced. C. has not bect fonnd anywhere but in milk. The quantity varies according to the period of lactationat which the milk is examined. Its amonot elson varics with diferent animals, as will be seen from the following tallio:-

Cato, i., the Wise, uita surname giveo to Mapers PonCato Censecs. This extraorinury man, commanty called descendant futo Lticensis, was a at Tnsculuns a 234 At the paral military a be bu cominened hat. arer 2 at. soldier, in n. c. 21 T, the renr in which Ilannilial caretr as a waste the north of Italy: and served again nuder Fabins at the capture of Tarentum (8, C. 209), and under Clatdine Nero in the premoralike battle on the bauks of the Actanras (a, c. 204). Tis fante, however, dues not rest on his military achievements alone. In the intersals of war he employed himself in cultivating his hereditary farm, adrpting the simple habits and manners of the peasantry, anit soon becime conspicuous amung them for superint intelligence, prulence, and angacity. Having in this way attracted the notice of L. Valerins Flacens, military talents, efoquence and inflegrits, by whom his preciater, he was indaced to remure to Rome ald there, aided liy the smppert of his patrun, soon hemin to distinguish himstir in the Fornm, and became a cannldate for office. Passing through the subordiuate uffices of quastor. adile, ant pretor. and exlibiting in these he principles which be had adopted in yonth, he was elected consal in b. C. 195, ulong with his frient all putron Flacens. In Hither Sputh, which was ankigned to him as the provitue, he dispiayed military genins of a very high order, which sperdily reduced the whale country to sntycetion. In B, C, 191 he distinguished seema go fore and there benceforth upume us antive and woding citist ukink a conppicuous purt in every pulbic mone The great eqoch in tus life was bis clection, in s, c. ISt o the censursinip, the duties of which he performed with the fearless etrictness of un ancient Ropuat Iti unshaken fimmese in checking the luxurious bahite of the nebles, and in assailing their crimes and vicea ex posed hint to grent ohmogy: but he purshed the cours which the had jirescribed to himself regardless of the consequences. With all his rusticity, Cato was a friend to literature and was one of the patrens and admirer of the poet Eanins He upplied himself in ollt age to the stuly of lirock Itteruture, and is represented hy eicero as un arient atmirer of the himporinas, philono

(Law.) A suit or action. Any question, civil or crimieration or mutive for making a contract
(Plilos.) That by which something known as the fect is produced, nnd nithout which it conld oot bave existed. Four kinds of causes have beea distinguished by legicians: the material, the efficient, the formal, and which that meteriat cause of a thing is that ont of which that thing is made; in other words, that which is the ground of the possibility of a thing a coniag into The effeient canse is that ia which resides the moving The efferent canse is that in which resides the moving actual; as the sculptor. The formal cause is that which must supervenc to the matter, io order to give the thin its precise individual existence as that thing and no other; as the elaphe whicb the eculptor commanicates to the marble. This distioction is derived originally from Aristutle, with whom it is rather a metiophyeical thing a lotrical determination. The final cause of the thing is that very thing in ite completeness; as the statue when made. See Anistotelianism, - The various causanity as to the hature aad origin of the principle of
can miud are ranged by $\sin \mathrm{V}$ Hamilton into two creat categories, the one cor W. Haming those thenries which consider this principle as cm piricol, or a pasteriori, - that is, as derived from expe rience; theother, those which view it as pure, or $\dot{d}$ prior - that is, as the conalition of intelligeoce itself, Thesd two prisuary generia he suldivides finto several suboril nate classes. (Siee Lrcturres on Netaphysies, vol. ii. p 385, et seq.) We attempts to explain it by what he
torms "the law of the conditioned," or the law of limita tion: that wo ure unable, on the one hand, to cooceir of nothing becoming something; ant, on the other hand, of sonething beconing nothing; that we are ut terly amble to realize in thourht the possihility of the increased or dimioished in the universe befag either posse rcuyrti, expresses, according to him, "is its purest form, the whole intellectual phenomenon of cauenlity This explanation, however, is not generally received philosophers. - The Doctrine nf final causps, which, with Aristotle, was merely ao inquiry into tendencies, has, by the theolagistns of modera times, been employed to establish the truth of a divine providence. The argument from timal canses, according to 1 r. Reid, when re-
duced to a syllogism, has these two premises:duced to a syllogism, has these two premises: -1 . That
design and intelligesce in the cause may, with certainty design and inteligeace in the cause muy, with certaiaty,
lo inferrel from marks or sigas of it in the effect ; and 2. that thure are the clearegt marks of design nnd wis2. the works of mature are the effects of a wise aed intelliLent cutse. Tause, v. u. Cedrrils, 21. (Bot.) A gen. of trees, ord. Pinacea. The cedar of Lehanon (C libani) has been celebrated from the earliest ages for its grave beauty, jts loogevity, and its magoitade; also for the excellence and duralility of
its timber. It is often alluded to io Scripture as at its timber. It is ofted alluded to io Scripture as at
emblem of stability and prosperity. The grove of cedar emblem of stability and prosperity. The grove of cedars on Monnt Lebanou is about three-quarters of a mile in
circumference; but of the 400 trees now standiag, there are bet 12 of extraordinary age. One of these is 63 feet in circumferuce, and has possibly beea in existence for some 2,010 years. This celebrated tree is not peculiar to Monot Lebanoon: it prows also upon movets Amanns and 'aurne in Asia Mipor, aod in other parts of the Levant, but does not elsewhere reach the size and height of those on Monot Lehanoo. It has also beea cultivated in the gardeas of Europe; two venerable individuale of this species exist at Cliswick in Eegland; and there is a very beantifal one in the Jardin des Plantes at Paris.
The benuty of the cerlar consists io the proportion and The benuty of the cedar consists ie the proportion and symmerty of wilespreadiog hranches aod cone-like the The gum, which exedes hoth from the trank and the cones or fruit, is soft like balsam; its fragrance is

## CELT

Cel'iniose, Celluane, n. (Tegetab. Physiol.) The mbstance which forms the mass of the cell-membrabes of
all plante. It is one of a class of componds iutimately connected in their chemical constitution, but presenting reolarkable physical differenccs. Without entering into of difference hetween it and the chemically allied suls stances - spgar, dextrige, and starelh. Sngar and dex stances - segne soluble in cold water, and occur in the cell-xay in solation; starch is insoluble io cold water, but softens into a mucilage in toiling water, and is found io gram ules in the cell-contenta; wbile $C$. is insuluble io cold or boiline water, and, as far as as at present known, is very slightiy solvble in the strong maneral acids, its oaly periect solvent being a solution of oxide of copper in aminonia. The occurreace of $C$ : in an orgasisun was formerly regarded as a certain proof that the latter belonged to the vegetable kinglom. It has, buwever, been sbown to be a coostitnent of the lower mimalg Although C. forms a large proportion or the food of intestinal canal uncbanged, and not to contribute di-

Celosia, $n$, (Bot.) A genus of plants, order Ainarantwers, and are cultivited ia our gardens. The best known is the Cock o-comb, C. cristatit.
Cel'sias, OL.ses, aneminent medical botanist and theologian, u. in Sweden, 1670. He becume professor of
theology, and of the Oriental hauganges, at Upsal. Iis mott celebr.sted work is entitled Hierabotanucon, or w1 account of the plants mentioned in the Bible. Ite wat also the first instructor of Lionsens, who bamed the genus Celsis after him. Besides his many botanical disgenus ebsis after him. Besides his many botanical dis legical works. D. 17 ibe.
Celsus, an Epicurean philosopher, who lived io the 20 century, A, D. Ife was a friend of Lucian, and aupposed
to be the anthor of the work against Christianity, en
 Chmous.
Celsus, Anerluts Cormelues, a Latio physician and anthor, who flourished probably in the reigns of Augnstug
aod 'riberius, and is supposed to have practised medicine at Rome. The only work of his that has come down to us, called De M dicind. rad consisting of 8 books, is considered the most precione book of its kind which the Romanas have lett us. C. Was etyled the Hippocrats of
the Lating, and is univereally admired for the purity of the Litins, and is universally ndmired tor the purity of
hin language. Eighty editions of his De Mevicint have been published, and a good Euglish translation by Dr Grieve appeared io 1756 .

( $M, c_{h}$ ) The powers which
 a circlo round some flxed point, it will have a couthaed
tendency to fly off in a straight line at a tangent in the circle, which tendeacy is called the centryfugul force; and the opposing power by which the body is retained in the circular path is called the centripetal force. The firs a state of rest or in a state of noiforon aed rectilineel motion of it he unt disturbed by the action of an exter mal canse. Upon this law the doctrine of central forcts is founded. It therefore considers the external forces which att upuo a body in motion, when there is an alteration, citber in its velocity, or direchiou round a central point. It also considers the law of the force by which a body moves nronnd another in a known curve, and sulves varions mathematical prohtems. Gravity, as exemplified it the force whichacts on all bodies from the ceotre of the earth, is the simplest and mont general example of a central force. Kepler and Newton deve

 sad emperor of the $W$ (st, D. April 2,7t2. This illustrious prince, the restorer of oriler anil obelliegce in a state of society when only the most commandiug talents and
 worst forms, was the grameron of Ch.rles-Martel, king of the Franke, and lived it3-il4, master of an empire which embissed all Frince, a part of spain, more than
half of Italy, and nearly all Germany. To feel lis greathalf of Italy, and nearfy all Germany. To feel lisgreatness ade puately, it mist be rem mbered that all the
ancient landmarks of surcial orker had been overthrown with the colossall Romath power, and that the whole civilized world was covered with its ruins and infested among a score of petty tyrants : the Saracens had overrun Spain and threttenel the farther west: the northern kingdoons were only known as the craile of alventurons arnoies, whose lealurs in after years organized the fendal zoveroments of Burope; Russia did not even exiat : and Enghand was just emerging from the confusion of the Ileptareliy. Simp two conturies before, 30 611, Clovis h ad fountled the Frankish monarchy and es tablishad himself at Parls, ont his power was that of an absolnte military chicf, and he was succeeded hy a line of phantom kinge, whose action is ncarcely divtiuguisharound tham At lemeth Popin Il eriatal and his sun Charles Martel slowly payed the wity for a new anthority, the former by familiarizing men's minle with fustice and groslness in the Boverejga: and the lattor liy his herni- resistance to the Saracens, and the promige of an irresistible juwer in tho government. The enc-

antler the commanod if him ambithon had vant gening, faTured by the compliance of the pupw, whe were willing
 dremaded yower of Haronn-al-Ranchid. A catalegho of
the principal events and dates is all that we can give in the space to which we are limated. In $76 s$ Cinucceeded to the government cunjointly with his brother Carlo-
man: and on the death of the latter, io 771 , Lecame sole man: and on the deatu of the latter, io 71., wecame sole thority with his nephews In 770 be suluhned the re voit of Aquitaine. In Ti2 he marched ausidet the still idslatrous suxons, athd commenced a contlict which be maintained for upwarls of 30 years. In itis he crossed the Aljs, and was shortly crowned king of Lombardy, and acknowledged suzeraio of Italy liy the pupe, with the right of confrming the p.ppal elections. 11178 be carried his arme into Spain, und pursued his victorious career as far as the Eliro, but was snrprised on his re
turn in the pass of Roncesvalles, where many of his turn in the pass of Roncesvalles, where many of hix knights perished, and athong the rest Onando, or land, his nephew, the hero of Ariosto. In 780 Louis 1 Deboonaire, his yonnrest son, was crowned by the pup king of Aquitaine, and Pepin, his 2il son, king of Lom harily, both at Rome. Between $\mathbf{i} 80$ and 782 he visited terrible retribntion upun the Saxons, aud conppelled thenr chief to accept Christiath baptisma. Coward doiner all in fotablishillt seminaries of learming and clergy. the must of whom lud hitherto kuwwh littie but the Lord's Prayer ; bestles engaging in projects for the acceleration of commerce, the gencral improvement of the people, and the proanotion of science. Before the end of the century he had invaded I'aunonia, and ex tentled his domioions in this direction to the mountrins of Bulemia, and the Ratith. In 800 he was cruwned at a nnion with lrene in order to consolidate the ceistern aud western empires, when the empress was dethroned aotl exiled by Nicephorus. From this period to bi death, which took plave at Air-lu Chapelle, in the 71st vear of his are, and the $4^{-}$th (Jan. $\left.25,81 t\right)$ of his reign he was engaged in furtilyiner the conats of France against the Northmen, and various mott cre relating to the se curity and the prosperity of the empire, including the settlemeat of the succescion. To person and manners C: w. s the perfection of simplicity, budesty, frayality and, in it word, of trne greatanss; and though he was to much given to the soccety of women, he han the reputa-
 ermment und whether in the camp or the court, had fixal hours for study is which he took care to to his conrtiers by forning them into an acaderny. "For shame! " he exclamed, to one who came before him at tirel mure elegaotly than the occasion debanded, "dress yourselt like a man; and if you would be distingushed, let it he by your merits, not by your garmonts." His nearest friend and companion was the if lustrions Alcnin, and his fame was so widely spread that the only min, perhaps, of kinured cenins in that age, the great Caliph Haroun-al-Raschid, courted his groi will and complimented him loy an emhnassage bearing presents. Betore his denth, C. confirmed the sucbag the imperial crown upon the altur he ordered loul ag the imperial crown upna the altur, he ordered houis
to take it with his own hands, that he misht understand he wore it in his own right, voder no authority but that of Gid. Sca Vetanles Life of C. N. Y., 1877. Charie'maini. Javes Cailpigld, 1st bazl or, a disthoguished lish patriot; B. 172s. In 1783, this popoular noble w.ts selected to command the great national body of Irssh Volnateers, 80,060 strons, of all ranks and classes, pulitics and creelts, organized to resist the encrow hmenta of the British Tory government of that day.  cevelrated trench slatesman. poet, and historian, B. at St. Matu, 176s. In was in youhiniteuded for the navy, but "viacing a disinclination for the profesnion of arms
be, in 1791, set ont fir America, insuired with the ide of discovering the N.W. phtrsalge. Becoming acquainted
 his project ; ind the onthreak of the French Revolntion hatppeoing at the same time, indaced $C$. to roturn to Frames. During the Reign of Terror he escaped to London, where be comployed himself in a scholastic capacity, and uccasionally lived in great puverty. In 1798 appeared his great work, Getuie du Ghristiunisme, which produced a profonad effect upon the world at large. In 1n00) ho returned to France, and advanced his literary fanue still further by the prodaction of the fine poens
Atala and hrine. In 1803 he was anoointed Fronch min Aster to Switzerland, and in 1 sis made a pilgrimare to Jerusalew. Afterwards, having buccessivily represented his conntry at Berlin mad loonlon, ? was sent to the his conntry at Berlin and hombon, C . Whs sent to the Rume. On the necension of Lomis Plitippe, $C$. refosed to take the math of allegiance, rebigned even his pention as in peer, and oceupied hinse f thenceforth with literary latsurs. These were now necensary for his suppert, his whole property husing been spent. Most of his writings during this period of decluins uge, such as hin Shetchers
of Einglish Lilcruture, ure of small valne. Ilis chief of Einglish Lilcruture, wre of small value. Ilis chief
employment was the compusition or completion of his emuloyment was the compusition or completion of his
volathinous Memoirs from bryond the Tumb (Memoires d'Outre Tombe): and the right of puhlishing them after his death win sold hy him for a large lili- annuity. They exhivit an amonat of samity amickotism nimust mimar
alleled: but are full of interesting details, nud bay

enerally a banker, directiuc him to pay soame person, generally a banker, directing hin to pay the same specior order, on domand. The chief differences between check and bill of exchage are: 1, that a check is not due until preseated. nad, cunsequently, can be netotiated any time before presentmeat, and yot rut suligect the bolder to any equities existillg between the previotis
parties; 2 , that the drawer of a check is not discharged parties; 2 , that the drswer of a check is not discharged for want of immediate presentment with due diligence white the drawer of a hill of exchange is; 3 , thast the death of the drawer of a check rescimes the anthority of a bill of exchange does not ntter the rolation of the of a bill of exchange dnes not atter the rolation of the parthe bank is situated, because if not gon drawn it he comes a foreign bill of exclange, solyect to mercuntile law; requiring that it be prot-sted, nud that due diligence be used io presenting it, in order to hold the drawer and indorsers. A chack being payable on demand, is not to be accepted. There is a practice, however, of making checks goon, by the lanket, whirh lixes his responsibility to pay that particular check when pre sented; and amonate, in fact, to an seceptance. Such a marking is called crrtifying, and a check su marked is ( Sports) in Faiconry.
hawk when forsaky, it term tuplied to the action of birds.
birds.

## Chomisul Atracetion.

 chemasta, for the naku of conswantace urn brevity, hate
given to every element ons or two letters called symbols, which are osed, in conjunction with tigures and alge brace sigus, to express every known cumpeuod. (For orx.) have of the differeat elements, seo Atomic tim tation is founciples upon whief arodera cbemical ou more atoms of the elemeot it represents : thue $\mathrm{C}, \mathrm{C}_{2}, \mathrm{C}_{27}$ indicate reapectively, obr, two, and twenty-seven atoms of carbon. Two symbols, placed side by side, signify that they are in close chemical uavon, his, Agosikar an atom of oxygen. A comma, separating two or more kroups of symbols, mast be taken to nean that they are grot in sacb intimate chemical union that the gronjes canoot be separated withoet decompusition; thus, AsO, $\mathrm{N} \mathrm{O}_{5}$ represents nitrute of silver, which by certain treatthent can be separated into AgO, oxide of silver, and unon is still The sijo plus ( $+\mathrm{Nin}_{5}-110$ means nitrate of silver mited to an atom of water, 110 . A number placed on the left of a group of symbols sigoifies that the whule group, as far as the next comma or plus. is to be multiphied by it : thus, KO: $2 \mathrm{CrO}_{3}$ signifies that chrome neid. Sumetimes the gronp to le multiplied is enclased in a pareathesis : $3(11 \mathrm{fCy})+2\left(\mathrm{KO}, \mathrm{s} \mathrm{O}_{3}\right)$ menus that three equivilents of eyanide of mercury are united to twu of sulphate of potash. Formolae may be empirical or rational - the former giving nerely the constituents of a compunad; the latter indoathing therefore, that a compoond can only bave one eopirical formula, while its rational formale are as numerons ats the theories of its compusition- Alcohol, for instance, is represented empirically hy the formatit ${ }_{4} 11_{6} \mathrm{O}_{2}$. Aationally, it may he represented as the ethylato of water, $110, \mathrm{C}_{4} \mathrm{H}_{5} \mathrm{O}$ : the hydrated oxide of ethyl, $\mathrm{C}_{5} \mathrm{H}_{5} \mathrm{O}$. HO ; as a compound of olefliant so on adinfinitum. Berwekets are usci to denote sabstitntion compuands: that is, compounds in which one clement, or kromp of elements, bais lieen substituted fur nother, witnout materially affecting the claracter of the compound.

II $\rightarrow$ represents ammonia

NII is the formula of ethylamine, or smmonia with $\mathrm{C}_{4} \mathrm{IH}_{5}$ )
an ntom of hydrogen, replaced by nn atom of ethyl formulas, that it will bo well to nutieed into chemical dashes are used to denote the ntomic power of the element; tho other, a lioe throuzh a symbul, to signify
that its atomic number his hee that its atomic number has beell donhled. Bi' means that bistunth has a triatomic puwer in
jug Bulistitution compounds; thus,
$\mathrm{N}_{3} \mathrm{H}_{3}$ ?
$\left.\mathrm{Bi}^{\mathrm{i}}\right\}^{\text {ie }}$ an ammonia compound in which three equiv-
nleuts of hydrogen nro replaced by one of lismuth, that methi havige "t triple miting jawer. This notation ist, whose viows un the subject are daily ginius chaund in Europe, mal are fally explatined nater the head $6: n$ manot's Sotatton. This new system, althongh precinus to tho chemist from its higher degreo of exactnees and precision, has for the goneral romes and statent the inconvenience of being somewhat complicated and ensily subject to errors; and as tho noncient system is yot ninust exelasively in treo in this country, we have gener-

## nlly follownit in the present work. Heasieal Vomeaclatume

(hem.) The pronent Lavoivicr, net wall rimain a momathent th his marvellons powers of eyste-matic chassfication. It is based on tho great principle that the mane of $\pi$ compatind should
 ceivel trom the aldiemists, and were formed on no itelhnite phan. Thase chanents which have bern lately discorcrol istic property pansessed ly them, or from some worl in-
dicathig their soarce. Mutala, Hata rale, torminato in iun, us putassian, thetliam, \&c. ; metatheils in on, ns boron
 orygen. In arveral instances, theory gromathal un inalif mu vement; for exbuple, oxygen was namell from oxus, neid, und grnnan, to generote; the Iavolsi-Tian thans, befug that no acid conld evint withont ovy geve. Snlmet quatly, howner, it was fonnd that oyy

 olerachits is submicted tor the meflom of the voltaic rur-
 (elentrongentivn ludy) woing to the puative pole. An

 of ilfferent propurtlons of a metal whth a metallofil The propertion of the metalloll is indeated liy the ad-
dition of a Greek or Latid numerical particte; thos we have the protoxide, sesquinxide, brinoxide, adod ternaide of various metnis, iudicatimg that these compounds contrin one, one and a half, two, and three doses of oxygen to fixe of metal. When the metal is in excess, Grees pretrisoritle of a metas, shoulag that the matal is in a double or tripleduse. Generally, the prefixes sub niml per are used to indicate the excens of metal over metalused iu several cases, such as sulpherel pinghturet \& ic but is now abandoned in favor of the termination ide The comprounds of the metalluits with ench ofther are named on the same priaciple. Whan the dose of oxygen is large, the compound is generally possessed of ecid properties; thus we have $\mathrm{Cr}_{0} \mathrm{O}_{3}$, the sesqeinatide of chromion, which is a buss; but by iucrensing the oxygea, we obtain $\mathrm{CrO}_{3}$, which is an acid cupatile of furbing
salts with hasce. The imount of oxyge containul in salts with hases. The imount of oxygen contained in oxy-acids is indicated by the termination ic or aus, or the prefixes hypm, under, or hupr, flove. A few examples of bases and acids will illustrate this:

| $\mathrm{Pb}_{2} \mathrm{O}$ | Dinoxide or enboxide of lead. |
| :---: | :---: |
| CuÓ | ..Protuxide or oxide of copper. |
| $\mathrm{Fe}_{2} \mathrm{O}_{3}$ | .. S-rquioxide of iron. |
| MnO | . Binoxide of manganese. |
| $\mathrm{AlHO}_{3}$ | .Teroxide of gold. |
| $\mathrm{PCl}_{5}$ | .. Pentachloride of phosphoras. |
| P\%12 | . Dudecasnlphide of phosphorue. |
| C10 | ... Itypochlorous acid. |
| $\mathrm{NO}_{3}$ | Nitrous acid. |
| $\mathrm{ClO}_{4}$ | Hypochloric acid. |
| $\mathrm{NO}_{5}$ | Nitric acid. |

Certain metalloids, such as sulphur and hydrogen, comwe have

| HCl | Hydrochtoric acid. |
| :---: | :---: |
| 11 Br | . 11 y drobromic adid. |
| As | Sulpho-arsenous ar |
|  | Suphonarsenic acid |

The compounds of acids with bises are ulways indicated by the cermioation or prefix of the word kiving tho ending in ite anil ate, the pretix being, of cuurse, preerved. A few ex.muples of this will snffice
Sulphate of iron=sulpharic acid +vxide of iron.
Hyphphosphate of head-IIypophospluric acid +oxide of lead.
Solphate of copper=-Snlphurons acid+oxide of copper. Hyposulphat
When the oxide with which the acid is united is a profor instance. the, the prefixes proto and per are adaed: trates of the protuxide and peraxide of thate are the nithe duse of acid is greater or lese than the buse, the prefixes sub, vespui, bi, nre used: as the suliorbonate, brombmate, and sespuicarlumote of podia. It dunble salte, the name of the base only is repeated; us the turtrate of potash and soda. There nere in fow instancen uf acids and salts which lave the same compositing. Lut differvat propertiss. They are distingui-hed frum the urdinary kind by the prefix mela; thus we live phoxphoric acid and artaphosphazic acte The prefix pyro kignifies that pyrogallic acul prodnced in this wily from gallic reld. It organic chemistry, the numenclature is in many cases sumewhat confused. This is nut owing to sny want of proper principle in the formation of acw wonls, bnt rather to the differences of opinion existing wimong chemists as to the cumpuestion of the substances indicated. Thus nuiline is called phenylamine, phenylia, and benzidam, ly different chemists, who cach hare o theory tonching its compesition. Orgnuic chemistry may bo defined as the chemistry of orginic ratiches or come puabals contaibing carlon, which act in every why as
elements. Orguic radicals gnouernlly terminato in $y l$, elements. Orgnuic radicals grouernlly terminate in yl,
and montly enntain carlon, hydrogen, nod uxywe. Thus
 and natts in the sume manner as iron. bead, or any of the purcly elomentary borliem. (Sve Osmaste Romevs.) Thore nre alo eompumale correspumaing to the electiomogativo lndies oryyen, hydrngen, nilmgen, \&c. We latre, for instunec, cyanomen und omiuligen, which furm cyanites nad amider, similar in their propertios to chtorhas and oxide. The tertuination of or ole in gemprally applied to nentral componnde of carhon and hyurogeth, mostly liquid, such us bensol, pyrol, quinol. Tho terntpation in is "pplied to other aputral sulentances, kenerally molihs; such ns paraflin, napheliolin, nut nollumin.

 th anime renomble smmonia, and are consilesed nulosttution compunads of that berly, in whirlt une wer more equivalente of lyafingen are replaced by mit organic radical. Tham we have ethylamine:

Chem'is1ry, (formerly Casmistra.) n. Ar.ktmia; fris from fro. chunos, jnice, hiquil, from chrō, to punr, to pur nut.] The science which relatus to the pecniar propertues of matter ; the propertics of ement.in ans of their sepre proportions in whichthey yaite, owern and effect these agencies
(Hist.) There is prriaps no science the gradual progress of which is so easily tated Chompirical miximg of as the science of chemistry- different properties, to form a thirl, differing from either, must have commenced a thirl, difsimg fing of the earth. The fact was thanswith
mitted to others who improved on it, and experimentell on other similar bodies; ant thus a mass of practical information was obtained, which grewlually developed into chemical manufactares. The origin of Corkirs of erally traced to Tubal Gan, inermes Trismegistus live in period of obscurity of which we know nothing. nerimo is said to have been the inrentor of Alchemy. A whin not entitled to tunchicredit. In any cas. Mizraim, was is said to have beclicol nation of the East; their glass the foremostors, colors, aod methol of embalming the dead pottery, culors, testimony to the fuct of their being ac quainted with clemaical pruce-ses bronght to a great stat- of perfection. The practical part of the scienc existed previoas to the theoretical: but by degrees, as men began to think, they began aloo to obserte and theorize. Thinking men saw that a gross earthy mat ter, such as irnu ore, becametrinsmuted, as int Whit fire into a hard metallic substance like roo. Whid more rational than for them to suppose that geld conld bo formed in a similar way? The change of earth the metal wiss to thim less worge Thas hegan ulclicmy. The orixin of neademy is lost in ohsentity. Philulogy, howorer, comes to onr ahi, and pints out to ys that counmon chemical words snch is alcohol, altwhi, ataugl, attu that tho Aribians, although. pirhaps, not the inventors of the black art, were at uny rate it most arflim rota ries. Gradually, another nomion bectume more gencrat, and a specious lo-ic was brousht to bear on the fact that certinn ealts and liquors of a metnicac nature w suaged pain and restoced o to to find a compound thint then but one atep further to
would prolong life indubaitely. Annther olject of pur suit was the univers.l solvent, or atkathes.
practisers of alchemy were, no doult, honest, serinu practisers of time wore oo, there arose a miss of im postors who fonnd really dopes io avaritions prople who were ever ready to buy the secret of undounte riches. In this wiy there was formed a mass of atmon valgar by secret symbols, and an absurd nomenciatiare Thitughth this accumalation of raboish thert, hithough golden veins: ami we minst aever fon anil universal sul atchemy had its philosophers stonits ant preparation vent, it asd in our own latooratories. Tuwards the ell of the 17 th century aroze a set of men whoze brain deceszors. Puttiog aside the illta of tramsumtation metals, thuy furlued their attention to the thiserm? of the principles that governed the furmation ath comp sition of bohes alrendy in chineras that might for ev
fate their grasp. Paracelsus, thongh tmbued with the hacifnt thectrians of attology nud hemombogy, mink pity for this funlts. H0 nunt uver he consulered us the

 ary, and aro held fog great antsent. The wotal value of
commodities exported from China in 1805 renched the figure of $\$ 173,609,085$, as againot imports valued a showing a total quantity of $223,679,182$ 1hs. shipped Taking next rank itter tea cobses raw silk, aggregatim 40,726 lates; nud cotton, $35,855,792 \mathrm{bbs}$. The produc tion of the last-named staple is, however, stendily de creasing: the quautity exported in $1>67$ haviug fulten to oniy $52-18,1 \mathrm{lis}$. The total value of imports into th U. States from $C$ : Juring the fiscal year edding June $30_{4}$ 1807 , umounted to $\$ 12,112,440$ as agaiust direct exports and reexports, $\$ 9,540,208$. Within the same perioti, 101 vesbele, of ui, 50 tons, eatered the I. States froms this empire, while the clearaoces, vice versa, gave a return of
77 vessels, or 59,881 tons.- Gickl, dx. The furm of govt of the Chinesse empire is strictly patriatchal. The emt peror, who bears the various enpbuistic titles of the "Brother of the Sum and Moon;" Tën- Csy l , or the "Son of Heaven:" Ta-hwang-li, or the "Great Emperor; and W'ansuy-yoy, or the "Lord of a Myriad Years," regarded as the father of his people, and has unlimited power over alf his sulyects. The fondamental liws of the empire are luid down in the first of the F Four Books of Confucins, which prescribe the govt. of the state to b based npod the govt. of the family. Tbe emperor is prient of the enspe, can alone, with his as highprisot of the enpire, can alone, with his immediat cious ceremonies. No ecclesiastical bierarchy is main fained at the public expense, nor any priesthood at tached to the Confucian or State religion. The administration of the empire is under the eupreme direction of the "Interior Council Chamber," comprising 4 mem-bers,-2 of Tartir, and 2 or Chinese oripin,-besides 2 assietante from the Hun-len, or Great College, who have to Eee that nothing in done contrary to the fundamental laws of the empire, contained in the sacred books of Confncius, These members are denominated Ta-hyo-si, or Ministers of State. Cuder their control are the He-poo, or 6 boardb
of government. They are: - 1 . The bourd of civil opprintments, which takes cognizance of the conduct pod $p^{p o n n t m e n t s, ~ w h i c h ~ t a k e s ~ c o g n i z a n c e ~ o f ~ t h e ~ c o n d u c t ~ a n d ~}$ nues, rozulating all financial business: 3. The board of rites and ceremonies, which enforces the laws nud cos tome to lee observed hy the people; 4. The arilitary board, superinteadiag the alministration of the army; 5. The bnard of public works; and 6. The high tmibunal of judicial jurisdiction. Independent of the govt, und theoretically above the central administration, is the Tu-che-yirm, or board of public consors. It consists of
from to to 50 mambers, nnuler 2 presidenta; the one of Tromtar and the other of Clinese birth. By the ancient Tartar and the other of Chinese birth. By the ancient
castom of the enpire, all the membert of this board are privileged to prepent any remonstrance to the sovercign. privileged to prencnt nny remonstrance to the sovercign the 6 governm ant boards, withont taking any part in the deliberations, and others have to travel through the vanioue provs. of tho empire to inspect and superintond the udninistration of the chief public functionaries. The bamboo, as the chief instrument of govt., is applice without distiaction, to the highest and the lowest Chi-
nese. Yut this govt., amidst the excess of its despotiem,

Pig. Shs. - a civil wrymen.

Their long llack hair is plaited into a tail, reachime from the crown of the head to the waist, and somethuse to the calf of the leg. the rest of the sealp being chasely shaved. Tho people in gencral are weil cluthed, the
higher radks in silks and satins, and the lower in cot tob. Some of the loastucu, hawever, who ply on the shores of the Yellow Sea, are thestitute even of surl clothiog as derency requires. They are catronely derty cold water, sither for drinking or ablution, - Munner and Cusbims. The nationat character seems to partaki of a large share of that kinl of watchtul jealousy which might be supposed to lie clerishad ntaler the oye of constant thatigh inot a viuknt depotism. Every indi
cation of ehergetic or velachent actoo is stuilumsly dis
 to an rulless romene of paralo and veretmay, legally regulated to its minutest points, by the applization of
the bamboo rod. To sperak but sedquos mal only great occasions, is coosidered highly becoming; whitst a certain gravity sits upon the count chance, whelly at variance with European ideas of gayety. Danciur the
have not the remotest iflea of. Tince are mectings for the lower ranks; bo balls, routs, or concerts, for the higher. They camnot conecive bum amy one shonld hadd delight in the exurcise of wrestling boxing, or fencing, or in hetive games, such ws crirket golf, or tennis. The firtars, inhemd, delight in hanting: nese. The unty amnsmeuts, therefore are tluib fuiste which are conducted in as griviand ceremonious a man, ner as can well be ionatined. Public intuxication thromes strong liquors is of very rare occurrence, thonght they havitually iodulge in the inebriating practice of stmoking opinm. Their greatest and best good quality is an steady and unremitting indnstry,-Kelignon. Fu, the
doctrine of Confacins, or KESG-FV-TSE, q. $r$., is the only religion recognized by the State. Rut there are two other Ascts : Fo, or Bnduhism, rad Tizon, or a Chinese form of "Rationalism," (see Fo and Twe:) Kelizion.
however, of whatever kind, has always luen reckoned is however, of whatever kind, has always lawen reckoned a
matter of secondary importance in f: Miny endeavors have been made to introdoce Claristianity inta the Jewish, but with scant success. The Mohanmadan, a languishing conditim. A semi-political, semi-religinus movement, which liroke out in this empire about is.51. and which, it is helieved, threatened for at the the sustversion of the nctual guvt, was long attributel to the
teaching of Christian missionaries. But this bulier was teaching of Christian missionaries. But this bulief wads
scarcely fonnded on fact. The insurgents, commonly scarcely fonnded on fact. The insurgents, enthmontytainly uot Cbristians, fur the mnny atrocious acts-ncts inexcu-ahle by the direst necessitius of warfare-showed them entirely unacquainted with the divine precepts of
Christ's gospel. This, too, wis the conviction of the civilized world at large, and by British and American heip, the Tae-pitags were overthrown in $1836 .-$ Eihtcation. The pursuit and cultivation of learniug is more enconirsged and favorpd in C. thath in atrest in theld that all state employments are givea by compertition as rewaris to the best scholars. Schools are abundant in every part of the empire; and education is so geperal, atut its cost so reasomable, that reading and writury bay be almoat said to be universal. Every literary honor conifers upon its recipient the title of mandarin. - Hist. Thi early history of C. is involvelin ulscmrity, It is certain, degree of civilization. The most meporable mod-rn conquest was that of Genghis lhan. who in the 11th His successors, however. songut to improve by policy what they b:ul acquired by aross, and dirigently apjulied themselves to repair the ratvages made liy their first irruption. Their dyasty graduadly lost its enerey, aml was supplunted by one of outive Chinese priaces, called the dyasty of Ming. In 1294, the first Catholic uid sionaries appeared at Pekin. In the beginuing of the 17 th cent., this dynasty was overthrown in : in irrup.
tion of the Mantehoo Tartars, who have eyer sinue cointinued to hold the sovereigoty of the enmpire. In 1.40: the first Protestant missionary, Mr. Morrison, catur Canton, and translated the Bible into Chinese. From the 17 tb cunt, Great Britain olntained a firm Fiothold in China; butt the persistency with which the British endeavored to flood the conntry with opinm from India eo disgnsted the Chimere govt, that an embassy under Lord Amherst sent to Pe-kin in 1816 was wot adbitted into the presence of the Emperor. Farnestly desirons to put an eod to this pernicious traffe, the Chincse govt made the use of opium a capital crime. ( $188:$ ) and in $18:$ compelled the British merchants to deliver up their stuck
of opium, worth $\$ 20,000,000$. The irritated British comof opinm, worth $\$ 20,000,000$. The irritated British comkauwn as the topiam W.ar, ' led to the treaty of Aug, $29,1 \mathrm{~s} 42$, by which commercial intercourse with Grea Britain was restored, 5 ports opened to all mations, th 21,0ix),000 accorded to the British merchante. By supplementary treaty, Oct. 9 , 1843 , British merchants
were allowed to lease real-estate at the ahowe porcs, th were allowed to lease real-estate at the above ports, t,

 ncters. Balcontes are fonerally formed in frome of the
apartments on the first-floor, the front of which consisty of trellis-work. The imperial palaces are of great extent; consisting of a series of courts, with gamernes and
halls of audience, beautifilly painted. The temples differ greatly in form and size, but, in many points of architec tural construction and decoration, tbey resemble the dwelling-houses of a higher class. The ordinary temples or joss-4ouses, consist each of one chanber contaning an
fidol. The Buddhist teruples are larger and more elabrate, consisting of a vestibule, which leads to courts conare seated colossal images of Buddha The pargodis are seated colossal inages of Buddhat. The pagodas, aither monumental records, or are intended tor the re ception of some relic of Buddha. They are generally octagonal in form, and nine stories in height, and surmounted by a conical roof, from which an ornamental pole rises. Each story is less in size than the one below it, and is surrounded by a balcony, from which a sort of penthouse projects, ornamented with bells at the corners These pagodas are built of brick, and the exterior of some of them is costed with porcelain tiles. The wall of their cities are high, and broad at the top, with squar towers at intervals. Their castles are also equare in porm, being contracted in size towards the to $\boldsymbol{p}$, and sur

Chinese Lansuage and Literafnre. The Chinese langusge belongs to that class of tongues in Eastern which each word is pronounced by a single movement of the organs of speech, and each expresses a complcte rles or object. The words all terminate either in a vowel or diphthong, or a nasal sound. Of such words or roots there are about 450 in the language. Many of
these worde, however, are differently pronounced or these words, however, are differently pronounced o accentuated, some of them in 4 or 5 different ways,
and having as many different meanings. There are beand having as many different meanings. There are, be sides, many words that, with the same prontunciation, express very different things. The words undergo ny clension is made up by particles, or by the position of the words in a sentence. Thereare numernus dialects of the Clinese; but it is said to be spoken most purely and correctly at Nankin. The best grimmars and dictionaries of the Chinese language are those of Morrison and Medhurst. In Chineso the alphalet is not composed of letters, but each word has a certain character pecuhar to itself, and bescetbe number of characters corre the same words differently pronemnced expriss difterent ohjects, the number of written characters must newu arily correspond and bence it is said that must netue of characters in the language exceeds 40,000 . In it origin the Chinese language is hieroglyphic or pictorial, and to the original characters a number of symbolica, and conventional signs, have been udded; by the mion of which hieroglyphics and symiols, with an imperfect indication of the sound, the greater number of the Chinese characters are composed. Native grimmatrians divide their characters into six classes: the first comprising simple representations of sensible ofjects, as the un, moon, mountain, tree, \&c., and including 608 charthe union of two or clares includes such as are formed by the union of two or moresimple hieroglyphs, which give a more or less clear iden of the meaning intended to be
conveyed; as the aun and moon combined give the idea of light : mouth and bird, that of song. Of this clase there are $7+0$ characters. The third class is compused of such as indicate a certain relation of place, as above, below the numerals, dc., of which there are 107. Tbe fourth clast comprises such characters as, by being inverted, convey a contrary meaning; as, right, left, stavding,
lying; and contains 372 . The characters of tho fifth chess are termod borrowed characters, as expressing ith stact ideas or mental nets loy means of representation of sensiblo objects; as a beart signifying the spirit, conprises those that are composed of a hieroglyph and a mark representing tho sompd. Almost all the name of animaln, trees, plants, and many other objects which of nnimak, trees, plants, and many other objects which
it would be too difficnit to represent hieroglyphically aro indicated in this way; their number in hiven at 21,810 . These, howover, are merely repetitions of thos of the other fivo clanses; so that the entire number Chinese charactera maty be reduced to $2,+25$; and if one has learned these, ho may lee saill to know all. Of the growat number of characters that are to bo found in Chi nese dictionaries, amounting to almat 40,000 , not more than a tenth part are in common use. In the arrangoment of thoir distiomaries, the Chineso solect a certain anort of key, end naswor the wane purpose for the let tors of our aphathet. - The Chankse Litteraterg In ut donlitodly the richest, and, in a gongraphical, historical, and cthnograptical goint of view, it is the most impor tant of the whote of Avia. The printed catalogue of thr Hbrary of tho emperor K-in-long connlated of 122 vols. and a nelection of tho Chinese classics, with commen

or the four boaks which were written by Contiacins an his disciples, and are to be regarded as the most certail sources for information regarding that inpurtant school of philosophy which has in so marked a manner affected the whole intellectual and political condition of the Chisese. These four books are generally krown as th
works of Confucius, and have been translated into variWorks of Confucius, and have been translated into vari
ous languabs-into English by Collie (Malacca, I8.26) Ous languagus-into Enghsh by Collie (Malacca, 18 - 6 ) Almost contemporary with Confucius was Lano-tse, alsu
the founder of a wide-spread school of philusophy. In my thology they huve The Book of the Mountains and Sea and the History of the Girds and Spirits. In jurisprudence worthy of special notice is the general collection of laws and the criouiual code of the present ruling dynasty Chinese literature is also very rich in medical work and works on aatural history, astronomy, oranography geometry, ugriculture, war, music, and all branches of technology and mechanics. (See hésume des Itinct poux Truites Crinois sur la culture des Murirs et li Ein cotion des Vers i Soie, by Julied: Paris, 1837.) In phi lology, the first rauk is due to their dictionaries, which
haye been prepared with great diligence, and examples have been prepared with great diligence, and examples
collected ont of the whole treasury of Clinese literaconlected ont of the whole treasury of Chinese mitern
ture. The greatsit work of this kind is the dictionary of the ontperor Kang-hi, which is now regarded as the of the emperoriky for the form propnnciation and sis nification of the characters. Equally rich and valuable is the encyclopedic literature of the Chinese; amon which is the work of M.i-tuan-lin (A. b. 1300), entitled Wen-hien-thong-khao, -i, c, an accurate examination of the ancient documents, with rich snyplements, - pre seatug an inexluustitle mine of the best maturita for a thorongh koowledge of the Chinese and the neighboring races, from the oldest to the most recent times, in every department of life. But the most valuable de partment of Chinese literature is undoubtedly the his torical and geographical, which are susolutely indis pensable to a thornugh knowledge of Uper Asta. Sbe Memorials," from every available source, and gives the history of China from B. c. 2637 to the commencement of the dynasty of 11 ma , in the second century before the Cbristian ara. This work has been continued by the different dynastios, and forms a complete collection of the annals of the empire down to tbe end of the las dywasty of Ning, A. D. 1643. The entire collection of the official annals from $2698 \mathrm{n} . \mathrm{e}$, to A. n. 1645 , a perie of $4,3+3$ years, and comprising 3,305 books, is to be found perfoct in the library of Munich. Amongst their other labora, the Chinese bave ly no mead neglected poetry, lyric frocts, the numes of Tu-bir and Li-thai-pe, lyric flucts, the bames of Tu-su and Li-thai-pe, who
flourished atbont the sth century, are sjucially fabons. Of their numerous poems little is as yet known. - The romauces of the Chinese aro not characterized by auy groat tlights of the imagmation, but are valuable as giving an insight into the domestic life, and the mode of thinking, leeling, and acting of the people. Their dramatic poetry tollows peculiar rules, and approache partly the romantic playe of the Germans, partly the

and England, whose gentry derive their origin from buth, bave been the countries must distingnished for the prevaleace of this institution. The martial spirit of
the Spaniards was indeed partly animated by it; but in their country it always bore something of the character of a foreign importation. modified by the circumetances of their jnxtapusition with the Arab race. In Italy, it existed only among those classes which imitated the manners of France and Germany, and never entered ing the popularity of the poetical romances of chivalry. Ang the popularity of the slavooic nations it has uever prevailed exAmong the slavouic mations on ias uever prevanfel exsociety derived a certain tincture from it, it never peeeirated into linssia. It has been often remarked, that it is only within the last two or three generations that the Dobility of that conatry, by their intercourse with the nations of Western Europe, have derived something of the epirit of the chivalrons code, so far as it still exists
ie civilized conutries. The point of honor, and its peie civilized conntries. The point of honor, and its peculiar conconitant, the nsage of the duel, were scarcely
known in Russia before the present century. Chunalry known in Russia before the present century. Chimalry
originated in the feudal attachmeet of warriore to the person of their king or chief, wbicb has been en often described ns characteristic of the ancient Germans. Hence the English word knigh, which, whea the Norman "chevaliers" were first koown in Eugland, wat spootaocously used as the translation of their tutle, signified originally a servinit or attendant. At what precise time the devotional character was added to the original martiad impress of mational usages, and the coupound system of chivalry thus prodncell, it is not casy to ascertain. It hus been satid that the inveeti-
ture of the knight was purely military utitil the reign ture of the knight was purely military until the reign
of Chorlemagne; and it may be supposed that the wars of Chorlemagne; and it uay he suppused that the wars
nf the Franks against the Saraceos first blended the ardor of war and religion tugether, and that the Crusades completed the union. At the latter period wort institited the two celebrated military orders of monks, the whose government combined mouastic and knightly usages. Alter valor and devotion. the third characteristic foaturo of chivalry was gatlantry to the fair sex: and the sonrce of this sentiment also has been traced to the habits and fuelings of the Northern tribes, among
whon woman was looked on with a much more exalted Whon woman was looked on with a much more exalted
schse of her dignity than in thr most civilized connsense of her lignity than in the most civilized conn-
tries of nutienity. If the Crusades communicated to tries of nutiquity

that the peculiar ceremonics which in the forrteent knighteuth centuried accompanted the crestion of a knight - the vow of chivalry, the watebing, prayer, from such fabmlous recitals, which were read and re from such fabmous recitals, which were rem and every courtly compatoy. Before that period the manners of the knigbts abd dames had exhibited but little of that polishand refinement, their seatiments of 50 eluch imaginary dencription; sul, is later times, chivalry gradually decayed. its mases were main tained with even juore of magnilicence than before ; its various rites, titles, and distinctions existed for a long period in most Earopean countries, and partly resuaio to this day; but the spirit of teudal devotedness wat quenched by the mnituplitation of merconary troops; aiderence to a feudal lord was snperseded by the mor general teeliugs of oational patriotisu (which was al most wholly omitten in the convaliz code), and the ex travagances iuto which the imaginary point of hono had led its votaries fell into discredit and ridicule. It is, therefore, to the $1+$ th century, and especially to that chivalry, Froissart, that we mast look for the petiod when the line botween real society and that represented in romances was nobt nearly broken down. When the usabes of chivalry were most tlourishing, all biea of noble birth (except the highest) were supposed to pass through three orders or gradatifons. They first lived as pagea in the train of mobles and chiefs of high rank; next, as esquires, they attached themselves to the person of some individual kaight, to whom they were bound by a strict law of obedience, and fur whom they were
bonnd to incur erery danger, and, if necussary, saterifice bonnd to incur every danger, and, if necussary, sicrifice
their lives; and thirlly, they were promoted to the rank
of knighthood. (See KNigHT.) It is bufficient to observe here, that, however great the distinction might be here, that, however great the diskinction in point of rank and wealth, custom cstablished a species of equality soong all of the same order, which may bs said to exist among gentlemed of the present day. They formed all over Europe a comoron corporation, as it were, posseseieg certain forbearances. They were united, not by the ties of conn try, but hy these of feudal oftedience, which attached every knight to the banner of his liege lord, from whom he held bis fee; but little or rather no dishouor attached to kinghts who btre nuder no euchs reudet the, if they they were frec adventururs, whose order was a passport in every servico; snd, in the actual conflict, the hostility of kuikhts was moderated by usage. Thus, it was dishonorable in aby kuight to take a kaight's life if disarmed, and not to set him free when a prisoner on receiving a fitting sansum. In peace, also, knghts of alf countries were weleome visitors at the courts of chikilric sovercigns; and all exjoyed the privilege of present-
ing themselves at the tumrnament, and contending for ing themselves at the tumrament, and rontending for the prize. Chivalrous honor was chiefly supported in
two ways: first, by the single combat or dnel, whether two ways: first, by the single combat or dnel, whether
on account of serious provocation, or by way of trial of strenght ; secondly, thy the performance of vows, often of the most frivolous and extravagant anture. These were generally undertake for the honor of the ladies. Many generaliy undertake for the honor of the hastines. Nand recorded by frobssart. But the vows related not only to martial achievements, but to others of a more extravagant and grotesque charactor. We need only rcfer
to Noustrelet s narrative of the company called *Galois" to Nonstrelet's narrative of the company calted " Gatois" of knights und ladies, who buand theuseives, for love of each otber, to follow a particular code of usages; of
which a part consiated in werring thick clothes in sumwhich a part consisted in wearing thick clothes in summer anil thin in winter, to show that the power of their
love rendered thum inseusible to the differences of seaJove rendered them insensible to the differences of seasone, - a vow whict was mantanued with such perseactually died of cold. The commencernent of eneh exactually died of cold. The comamencenent of emele ex-
tratvigaties, however, hetokened the declino of the true ppirit of chivulry. It decayed with the prugress of mercenary armica and the decline of fendul institutions throngh the 15 th century; in the 16th, it was a little more than in lively recollection of past agos, which knikhtis shch us Bayard, and novereighs such us Francis 1. nad Hleary V111, strove to revive; sud, finally, it heeame extinguished amill religions discords. lewing us its aniy relie the cole of honor, which wate still coneidered

Choldrin, (kul'c-ra,) n. [iir, froto cholè, bilo, and rheò,
to flow.] (Mrd.) The Cholera-morbens, or sporadic C. is a disease accompanied by vomiting and purging, with great pain and debility. It generally conmences with a sense of pain about the bowels, fever, thirst, an irregular polse, and severe vomitiug aod purging of hitions few dave with the aid of proper remedies, but in severe few daye with the aid of proper remedies, but in severe
cases great exhanstion ensues, attented by depression anxicty, hurried respiration, cold sweats, hiccup, low andicty, hurried respiation, cold sweats, hiccup, low
and titteriog polse, sc., and patients rapidy sink.- $C$, Asiatic. The term Aviatic or sjasmodic C bas been applied to a most appratling form of pestilential disease which seems to have beea but indixtinctly known prior to the year 1817. It alude its alpearauce in Ang. that year at Jessore, after having previously riged to a forsidable extent in the south of Bengal, und thence it epread verer a great part of Ania, carrying off millions of limman beiogs. In 1823 it lirske ont at Astrakham, but did ast at that tibse extend farther moto Russia; in 1s 2s, however, it appeared at Orenburg. and during the an
tumn of that yeur and spring of $1 \times 29$ it spread over tumn of that yeur und spring of $1 \times 29$ it spread over a considerable part of She Rasbian dominions. It raged cartied liy the Russian army into Poland, it propagated itself through differeot parts of Europe in IS 82, , mad first appeared oa this side of the Atlantic at Qucleer, June 2, 1532, and in Now Fork. Junc 21, rapidly reaching moot of the U. Statece. In 1534, 24 49,1850 , and $1 \times 54$, it revisited this country, since which time it cannot be said to have reigned epidemically here, though it reappeared frequeutly in Europe. it osually hegins with sickness and purging; the discharge io this case nut being biliuns, but a thin colorless flud like rich-watir accompanued with great prostination of strength and cold
clammy sweats. In a short time dreatfil crimps assail the extremitics and afterwarals the aldomen, and other parts of the buly; the body becomes buth, the linuls pars of the bary; the body becomes bent, the immbs imprepeptible, the eyes smiken nud surrounded by a datk circle, the patient sirks mite a state of upathy, and, unless a lavorable chatoge speedily takis phace, he soon expires. With reaction, the fulse and natural warmt gradually retura, und the epasme ccase. Frequently the reaction is accompanied by fever, closely resumbling typhus, and wich is orten fatal in from 4 to 8 days. . from the switt process by which it devitalizes the blowd: when the discase runs its foll conrse thic bluod becone denrived of serum, without thast, it cluts, deconipoees, and death eosnes. C. is a discase of the bowels in so far as the lost serum reaches that wart of the body, prodncine curtain local gymptoms, but its true seat is in the blend. The panic which sets in upon the approach of $C$., relative to diet, de., is canzeless ; but peuple should he enreful not to eat unwholesome food. The home of $C$. is Iulia, and there it invarinbly begins. The brcilli or germ the ory of Dr. Korth is not kenerally accepted, and his cluim that he has discorered the bacteria, without the pres Wie refer the reader to an excellent treatise on C. ly Dr. Alfred Stille, of the University of Ph. Chornis. (kö'rus,) th. [Lat. chorus; Gr. charas ; W. cor, a round, it ecte, Fr. Cheur.] (Ant.) Among the reek festive vceasions, and also in the performance of plays. During the most Hunrishing periuds of Attic tragedy, the $C$ consisted of a group of male anil femate personages, who remained oa the stage as aystanders or apted
tators, and, dariog the intervals of the acting, chanted songs relating to the sobject of the play. They sometimes even took part io the perforatince, by advice, comfort, consolation, or dissiasion. In early times it con sisted of a great ountuer of persons, somectimes as many as 50 ; but it was aftermards limited to 15 . The leader of the $C$ was called coryphous, and sometianes the With the decline of ancient tragedy, the $C$, also fell into Wist the decline of ancient tragedy, the C, also fell into
disuse. In recent times somo attempts have been made to restore tho uncieat $C$, as io Schiller's Bride of $\boldsymbol{M}$ es-

Clirisıian'isy, n. (L. Lat, Christanitas: Gr. Christianitiz; Fr. Clirétienté; Sp. Cliristiandaul.] The relimion instituted by iesis Christ. From the period when the instituted by isciples "were called Christians first in Antioch," (Act xi. 26 , ) down to the present day, the main doctrimes of
the gospel, and the great moral principles which it ry veals an! contirms, have been proserved without inter ruption in the Church. But notwithstanding this sob stantinl udity, it cannot be denidd that the character of
the religion has been very miterially colored throngh the religion has been very miterially colored throngh different mutions and ages. The first marked forms of opinions whish acquired Christians tended in two very different dire tions. The Judaizing Claristians clong to the orlinance of the eller religion; but aitloongh, under the names of
Nazarcnes, \&c., they existed as late as the th centur they ceased after the 1st to exercise any very extensiv inflacoce on the Church. The Speculative Christian placed hirarative ioterpretations both on the external it with the philosophical and theurgical systems of the nncient world. Apollos of Alexandria was the firs teacher, it is commonly said, who introduced this spect
lative tendency into Christianity; and St. Paul, whife he Jative tendency into Chistianity, and en enils produced
does not condemo Apollos, dwells on the does not condemo Apollos, dwo from his tearhing deducel as it were separate body of doctrine, ( Cor. iii.) In this way arose Cerinthus, nad the Gnostics, protessors of the "knowt etlge falsely so called" ( $\psi$ єvঠَّ́vouos $\gamma v \bar{\omega} \sigma \epsilon$ ) of St. Paul. 2. At a later perind, the Manichauns, u la imported int Christianity the nution of the rival prisiciples of gou and evil, which continned for many ages to prossess an herents. 3. Within the Church itself, tho 1 lexandria Schook of Thealngy, which has exprcised a move perm nent influence. Thiss school, in the $2 d$ and sd centurkes became partially tinged with the sentimuts of Platomi philosophy; and was characterized ty the nente and re fining spirit of the East. Liko the Gnustics, its chief doctors enconraged rations of the faith of which the kes was in the possession of the learned only, (Clemen Origen, \&c.) In the meantime, the main body of belies ers, comparatively unifineted by the inflinence of scimp and speculation, was grahnally acpuriog new viows of different and more positive character. Daring tho first 3 centuries after the apostolical times, the opinions re spectiog the anthority of the pricsthood, the attachinent to forms and ordinances, the honor paid to individual purity of life, (and espectaly cution, pradnally and steadily ncreased and strongtbcution, , gradnally and steadily , ncreased and strongtb ened. In the West, and particutarly in Africh the Montans, tendencies became peculiarly strons. The Novely from Donalists, and the score of its defection from an inuagipary standard of personal purity; and when Africa bemary standard have a school of theology of her uwn (Tertullian, Cyprian, and others to Augustine), this was the direction of its libors. In that theology all is dogmaticnl, nothing speculative. Erwrythisg is taked in its nost literal and naked sense: God humself is not personal only, but invested almost with the attributes-of pumman agent. But dactrioes and ordizanctice njioined. The possible, and the utmost rigor of practice emjoined. The history of the Arrican Clmotch aftordsamone perfection. mentary on these strainings after imaginary per tection:

Angustine, it was not only subthed but obliterated by the first aseault of the Mhanumudus. The early heote inferiority of Chrest to the F, ther: the hast hatf uf the 3 bl eentury, ware the finst to promel it the the du trine of the Chureh, nud to seek to confirim

thro'mitum, Chromivm Ore, Chaome, n. Gr, chroma color; Fr. clurome.] (Chem.) A pretty rare element, first shown to be a uietal by Vanquelin, in 1797. Its most forportant ore is the chrome iron-stone, a compennd of protoxide of iron and senquioxide of chrominm. It is also fonnd as chromate of lead, from which mineral
Vanquelin first abtained it in the metallic state. To effect ite reduction, oxide of chrominm is intimately mixed with powilered charcoal, and made into a paste with oil. It is theu introduced into a crucible lined with charcont, and carefnlly luted down. The whole is exposed to the action of is puweriol wind-furnace for several hours, atad an impure mixture of carbon and chrominm is formed in the cracihile. Mr. Frenny has lately succeeded in procuring chromiom in the form of culical metallic masses, by passing the vapor of sodium over the sesquinxide beated to redness. By heating susquichlortde of chromiom with potassium, a gray me-
tallic puwder is formed, which cousists of chrominm in an allutiopic condition. Chromium is a light-gray might le iuferred from the dificulty with which it redoced, chromium, in the difficullic witate which it received any useful applicatium. Its exide and many of the chromates have received usefal applications in calico-priuting aud china-painting. - Eqnivalent, $26^{\circ} 27$ sp. grav. 59 ; symbol, Cr.
Oxides of
ral compound Prutoxide, Cro; seaquiovide Crost importsint are tour:perchromic acid, $\mathrm{Cr}_{2} \mathrm{O}_{2}$. - Protoxide of chromium cas only be obtained in the state of hydrate on addiag caus tic potasis to a solution of the protocbloride. It absorbs oxygen with great avidity, decomposing water and set drated intermediate oxide. The protoxide of chro a hy forins a double sulphate with solphate of put chromiun corresponding to the donble snlphate of iron and pot ash in form and composition. The crystals ere of a tine bloe color. - Sesquaride of chromium is easily obtained as a grayish-green hydrate, by builing with alcohol solution of bichromate of potash acidulated with sul phoric acid. The alcohol seizes half the oxysel of the chrotuic acid, leiving the sesquioxide free to form a sul phate with the solphuric acid. On the addition of ammonia, a bulky, gelatinons, grayish-green precipitste of hydrated sesquioxide is rroduced, which, when dry contains ten equivalents of water. In the hydrated which do not crystallize. These salts, forming salts which do not erystallize. These salts, like the oxide exist under several conditions, each conditiou giving complicated, the reader is referred to the article Iso merism, where the sulject is fully treated. The anhy druas green oxide is not decomposed by heat; hence it is of great use in china and enamel-painting. It is gensatily prepared for this parpose by exposing cliro mate of mercory to a red heat. The difficalty with which this oxide is decomposed by ordioary chemical reagents has rendered it uschul as a pigment for priating bankers ${ }^{3}$ cheques anal other muportant docunents; bot a great objection to its use is the fact of its being so hard that the pens used for writing upon drafts printed by it ing-ratter of the emerald, pyrupe, greeustome, andether miverals. - Chironic acid has alremly tome, and other under that hemid. - ferchromicacil is fornmed by aditis an turucous solution of peroxide of bydrogen to chromic acid. The limuid assumies a deep-blue color, but is rapidly decompused with evolutions of oxygen. If, howverer, the solution is agitated with ether, the perchromic ucid is isolated withont decomposition, and way be mate to form pretty stable salts with unmonia und certan organic baecs. strong acids deconpuse these Cults, setting free the bive perchronic acid.
Chonides of $C$. There are two principal chlorides of chromitum, - the prithetionde, CrCl, and tho sesquicurrent of hydrocen over the formed by pussing a dr redness; hydrochloric actal is given off, and the proto chloride remanins in the form of in white pewder, prot in water, with which it forms a bluish-green folution that rupidly almorhs oxygen from the air. - Nsquichlo ride of chromium is formed in heantifnl transparent plates of the color of pearli-blobsoms by passing a cur rent of dry chlorine over a mixture of masquioxide of chrominm mixed with charcoul contained in a porcelain tule lieated to rednesf. Being volatile, the susquichlofinl form just at the corl end of the tule in the buati fillable in water and racids. Sulutions of it is quite in of elarominm is propar 1 frotu thu livdrated by dismolviag it in hydrochloric echl The nelutionid evaporation, yieldes gramen cryatale, containing two alenta of hydrochlorio beid nat ton equivalente of water It in a nincular fact thet only two-thirila ef tho cislorine containel in the solution of this salt is precipitated by 'lero'smographt, $n$. Churets, n. [6ir. Kyriat-Kon, frum Kyrias, the Lard, (a

Ger. kirche; literally, the Lord's house.] This word is nsed is varioun significations, auswering to those of the
Greek Eккえ noja (Fr. église), which, from its original meaning of a contrned assembly, is employed, $1=t$, to
denote the whole body of true believers, or the visible church : 2d, is uddition to these, the spirits of the just made perfect, or the invisible Church; 34, any congregation of Christians met together fil a siugle place or
the bouly of believers resident inatown or district: and the boly of believers resident in a town or district; and
4 th , the edifice ia which they meet for divine worship. 4th, the edifice in which they meet for divine worahip.
To these we may add a fifl sense of the monlern term church, whed it is applied to a distinct religivus conmmnity; as, the Romau Catholic, the Lutheran, the Baptist, $\mathrm{dc}_{\mathrm{c}}$. The true lefinition of the visible Charch bas been a matter of much controversy. Ia this matter, as in any question relating to differences of Christiad
creeds, we decline to enter the field. creeds, we decline to enter the field.
(Arch.) Having described the forms of the earliest ecelesiastical structures of the Christians under the term Bustics, and the generul divisions of a church ander the head of Cathenas, we have here but to add that the where distinctions are recognized in them : pont fical, as Where distinctions are recognized in them : pontifical, as
St. Pet'r's at Rume, where the Pope occasionilly oificiates ; patioarchal, where the government of the church is $\mathbf{v e s t}$-d it a patriarch; metropolitan, when it is the se
of so archbishop; cuthedral, where a bishop presides collegiate, when the boilling to question is attached to a colleze; parocheal, when it is attacheal to as purish and crancentuat, when it is at

tion of the people; thungh it nayy not amount to rebelfion, where a usnrped power is ruling.
C'ivil Death, o. (Law.) That clange of state of a person, which is considered in the eye of the law as 'ivill Enirineer'ings, $n$. The art or science of constructing nuch pablic works as ure necessiry to the civil requirements of society, as canals, docks, railronds, bridges, dc. (Used is contradiztinction to military enginering, which is exclusively devotell to war purposes, Civil'ian, $n$. One skilled in the civil law; one versed in law and government.

## a their guide. " - Bucom

-One evgaged in civil, not military or clerical parsuits; as, the "garb or a cirilian."

## stadent of the civil law.

Civilisy, a. [Lat. civilitas, from civilis, pertaining to pulitunces; prbanity; conrtery; conplaisance; refine ment.
(pl.) Acts of good breeding or politeness; kindly courteries.

## Sond shame, with lore at strife,

'iv'ilizable, $a$ Susceptible of of life." -Dryden.
'iv'ilizalble, $a$. Susceptille of bring civilizel.
('iviliza'tions, $n$. [Fr. cirvilisation ; it. cirilizza
ivilizalioss, N. [1. civitizazione; sph cotalizucum. . One of those wonds in common use
which it is difficult accurately to defiue in worls. It is derived from the latin word ciris. n citiznn, probnally from those wha live in cities foills, mare civilizel than those who itlubit conntry parts, or from the living in cities being one of the great clarveteri-ties of cinilized life. "Whatever." says J. \&. Mill, "be the charncteristics of what we call sivage life, the contrary of these, or the qualities which society puts on as it himows off thesere, constitute civilization." Areorling to Guizot, the fundamental idea of $C$ : is progress or diveletiment.- the pertecting of civil life or of society, properly su culled: utermal life, the development of man himetll, if his facultice, his sontiments, his jdeas. Hlence f: sulaminto on two conditions, und nathifests itseff liy two symptoms - the develognemt of social activity, and thint of individual netivity, - the progress of saciety, and the progress of humanity. f:denotes a state of advanceannent from the anvage state to that bigher and moro perfeet coudhtion which hoth reason and revelation lemd us to behive to be the wimmte destiny of the hamam race. The history of $(:$ is the bistory of this priggress, ether in mations or in the ruce. It is a subjeret of the uthase importumer, and, as yet, little has beet dono 'is'ilize ith chenditin.
silize, r, a. [Hir. crifiser.] To reclaim from a ruale,
 manners nowng a people, and inmernet them in the arta C'is'ilizeal, $t$. Rerlamed from savage

Clas'sifiable, $a$. That which may be classified; as, Claswif'ic, $a$. Consti
Claswif'ic, $a$. Constituting a class or classes; arraoge C'laswifiea'tion, $n$. [Fr.] This word, io a
suse, denotes the arrangenieat of os variety of object into groups or classes, according to their resemblance or differences. It is from the power of abstraction in the luman mind, - the power of considering certain qualities or attributes of an object, apart from the rest, that classification is possible. No assortment or nrrangement can be formed annong things not perfectly
alike, but by losing sight of their individual or lesser alike, but by losing sight of their individual or lesser
peculiaritics, and limiting the attention to those which peculiaritics, and limiting the attention to those which
they huve in common. The propertirs that may be adopted as the basis of classification are very various, as may be seen in the nnmerons botanical reologion , ad other systens. When the propurties on which the clnd sification is based are arbitravily selected, the eystem in said to be ortificial; when they lie in the essential meture of the oljects themselves, it is natural. The ends of scientific (or natural) classification are best fonswered when the objects are formed into groups, respecting which a greater number of general propositions can be made; athi thuse propusitions more important than could eane thine pecting any other groupe into which the Eame things could bedistributed. The properties, therefore, according to which olyects are claswified, ehould. prosperties, or, at any rate, which are spre marl other them. The elld of ciae an instrament for the invest gation of nature, is to make us think of those oljects together which have the gratest number of important combion properties, tund which, therefure, we have taking thto joint convideration of our inductions, for are thas brenght convideration. Our the order of oljects shecoseful prosemution of intuctive inquiries gencmuly 'liswifien'fory, $a$. Dertaining to, or admitting of, (lav*ity, furio, to make] Wr. classifier, from L. Lat. classis, and oributo into chases: tormerrange in seta accoriling to mome proparties of elauractires; to systematize; to place in riner of mutural allinity; ins, to clasnify mankint.

when the frame was considered more susceptilite of exWhen the frame was eonsidered more susceptilite of px-
ternal impressions that at other times: and nfter which, if passed with safety, the body was likely (except from spueial circumstances) to eccupe the dangurs of mortality. The ancients, who fanly entertainged and implicitly belioved in these periodical clanoges, divided them ioto certain epocbs; the first titking place at the end of the ith year, und the subsequent perionls answeriug to the ounilier resulting frum the maltiplication of 3 , 7 , and 9 into each other - as the 21 st , the 44 th, the 6 h, and the sist. It is supposed that Pythagoras derived the doctrine of the $C$ system from the Egyptimen ; bat be this as it nayy. the changes that trike plare at these several periods are very important, and are of two opposite kinds - the one of renovation, the other of decay. It is seldom, in such an artificinl life as a high atate of civilization entails, that the processes of decay which nark the two last epochs can be curefnlly studied : sume stence orcurring, nader which, whenchromic, as of exerally the case, all the gradual advanees of nature tuwards husolute exlunstion are lost sight of and remain po noticed, till their comerntrated eflects are developled in what is known by the popalar fhazse of a "breakint up of the physical and mental streagth." When this © decay conies on naturnlly, it is funmi toshow itself more frequeatly, na always more strongly, in the mun than In the woman; the reasou of this is scit-evident, from the more netive, exciting, and exhausting career of the man declared of the woman. By the C.system, i years was of puberty; 21 of adnlt agre : and 35 , or five tines semen, as the height of physical ind tudily strength. at suren, times seven, or 49 the perton was said to lure reached the height of his mental stremath, or intellectani powers; at 63, or nine times soven. he was said to lave reached the gramd climacterict and at the tentle return of the seventh year, or Foth year of nge, the ordinary limit of hanon life was kaill to be renclad.
C'liasueter'ieal,, , Relating to, or denoting, a critical period of homan life: climacteric.
Clímalat, $a$. Pertainiog to, or catase
Cifmainil, $a$. Pertaining to, or canoed by, climate; ns, Climistar'ehio, $a$. [From Gr. klimatos, ond archein Hinna
. [Fr. Clmat, Gr. kima, klimatos, from (Anc. Grag.) A rution or zone of the earth fincline.] said by the nocients to decline towards the equator, and iocline towaris the poles.
(Clim.) Climate, in its most general acceptation, embraces all thoso moalifications of the atuosphere ly whech midity, varriationsof hamometric premenre, the trature lillity of the atmosphere or the efiects of wiode, the phrity if the nir, or it w thature with gimens embantions mores less sablirions: and hatly, the hathitun tlimphanily of the ntmosphare - that serenity of the sky st impurtanat on the thevelopment of organic tisatiea in vagetablesand the rijpening of fruits, lut utho wh the entembif of moral serosations which mankims experience in the different zesers. There are two genuml causes on which the climate peculine to any comutry principally depends- 1st. its dis-

 of the country: its fuclination nenl lewil expmenre: tho dirrection of the chains of munntains by wheh it is intresected, or which are in its vicimety; the nature of the tion, rall eviperation: the proximity tet, ur diatance frum aras: the netion of winin lilentling thin temperstures of difforent latitwhes; nud nven the changer proluend hy cultivation. The mppreciation of all these

 rapilily in summir, athl, in the mirth. busomen frizen gnently, be fateuwely hot or fintensely cold; and beneo

## CLIM

CLIN
CLIN
lands have a tendency to produce extremes of chimate. A place on the continents laving a mean Jannary telnperaturo of $50^{\circ}$ (a) very warm temperature for that mia-日an) is to he tount ouly in warm tatitudes, not one with a arean July temperature of $30^{\circ}$ (a cold temperatare The the season) Jatity tempurature of Nuw Jurk while the mean July temperature is North America the slmoof $500^{\circ}$ p.isses near the monte of and the July line of so posses near the month of Mackenzie River, or the areac circle, - the exteme wing this great change. In Asia, again, the January line of $50^{\circ}$ rous just nurth of Canton, near $26^{\circ}$ N. and the July line of $5 v^{\circ}$ tonches the Arctic Ocenn at the mouth of the Lena, is $\overline{720}$ N., making a differen of $46^{\circ}$ of latitude, or nearly 3,000 miles, as the effect the land on the climate. The waters of the ocean main unfrozen even far into the arctic, unlest crowded
with lands, their perpetnal movement tending to produce a uniformity of temperataro over tue hab of alad hence widd from the oceans or cold. They produce what are moderating and never very cosence of land from high is called an masuatitudes is equivalent to an alsence of the sumaree of extreme cold; and from tropical latitnders, that of extreme heat ; and the sinking of all lands would diminish greatly both extremes. But sinking high-iatatude lant Blso diminish tho extrume of heat, since the land become very moch heated in summer, and this heat is diffused by the winds. The nean temperaturo of the Northers hemi-phere is stated by Dove at 60 F.. ath that of the Southern at at ${ }^{\circ}$, while the extremes for
the globe, taking the ansual means, are hoo F. und zeron If there were no land, the mean $t$ tomperature would If there were no land, the mean $t=m$ peratare woul
probably be but littleabove what it is now, or not far probahly for the whole flobe.
(Physinl.) The faculty with which man can adapt him eelf to every contingeacy of clinate, and nut only exist, but flourish, undir the most opposito exiremes of heat of cold, wet or dry. is one of the nost remarkalik and yet the means by which nature bits provided for these vicissitudes of temperature are as simple as the are beantifnl. Althourb aature has been thas houstiful in evabling man to live with satety uoter the gloum of an arctic winter, or on the scorchor plare demanded from the man himself, if he hopes to pass throutgh his from the in either condition with comfort abd sufety That he may not err in his aluption of such necensary ruler he is assisted by a species of instinet and by number of examples, which, if he extrcise the reasoning propertics with which he has been so largely enduwed. can only through ignorance or inattontom caus him to do other than alwitys turn such evidences to his benefit and goidance. The first of these is the natural craving of the system for a dietary is accordance with the temperature of the conkry $w$ stomachad iman is placed - that is, nceording as the stomachaod imas fullow an independeat conrse of action. Thus, nuder Fertical sun, when the exhanstion from beat is exces vertical sma, wircnlation of the blood is in allance of the natural course, full and stimulatiog dict of suimal food is itself not only highly injudicions and unculled for, but, when persuvered is, becomes actnally lontfol, and may be, noder certaiu conditions, dangerous to, the integrity of the system. Again, if, under the crushio intluence of perpetual frost and shuw, a man attempt keep up bis animal heat and resist the depressing petency of benmmbing cold, by an Asiatic or Vegetaria dietary, the constquences would be equally dawgerons and erea more rapidy fatal. In the same nammer, the color of the matural to the judgroent of man, aod is region should appeal to the judgment of man. and in the same tone as thit of the native dedizens of the bush plain, the ice-plue or the jungle. Why man can eadur with impnnity ranges of temperature that, descrilned ly the realings of the thermometor, would to many appean perfectly absurd, proceeds entirely from the balance of power kept up between the temperature of the shio an that of the surronading atmosphere, by the circulation of the blood throngh the lungs raising the temperatore by the aberption and mixture of oxygen from the air with the carbon in the blood, and ereated by the instanbonic acid gas: adimat heat beiog crange. The mure frequently a man breathes as in rnnniug the greater is the amount of beat th inlividual experiences. It is from this fact - the genimidividua experiences. An extra amount of animal heat, with a corr sponofng evaporation from the surface of the hody - that the man whissme years ago, in France, exhibited hitmself seated in a baker's oven. Whate his linaer wats being cooked at his feet, was eoablell to enhlire withont dauger poriod of time.

(A.)-Johnsom. A fellow-juror; one who swears to anuthCojur credibility.
Cojintepee, (ko-hoote-paik, a town of San Salrador Central Anserica. It is situated 15 m . S. of the city of San Salvador. Mop. 15,000 . - At the distance of at few by 5 m . in average breadth; and in windy weather it assomes a grect hue, often casting on its shores vast quantities of dead fisb.
'olie, (kuk, $m$. [1'robably from Lat. coqun, to cook. to bake, to burn, to parch; lcel. 7nohr, a cook; Swed. and Guth. koliu, to cook.] Min-ral cuad burned to charcoal, or fossil coal churred and deprised of volatile onat-
ter. The most valuable of the secondary products of a ter. The most valuable of the eccondary products of a
cas establisionent is $f$ : The thest kind is obtained from gas establishouent is ! The best kind is obtained from
coal when carbonized in large masses, in ovens concoal when carbonized in large masses, in ovens con-
stracted on purnose. in a gas manufactory, the prostructed on purpose. In a gas manufactory, the pro-
daction of $C$. being of minor importance to the formaduction of C. being of minor importance to the forma-
tou of good gas, it is generally of an inferior quality to hat made in cuke-ozens, where it is the primary, and indeed sole olject for which the coal is carbonized. But gas-coke is excellent for many purpozes in the arts atid
manafares, prodacing as clear a fire as that of the first quality, though it is zeither so lastiug nor so free from slag; for domestic use, however, it is unoljectionable, and may be bornt both in the drawing-room and kitchen with economy and eatufort. The distingnishiog characters of good C: are: First, a clean, grannlar frac ture in any direction, with a pearly lastre, incliuing to that exhibited ly cast-iron. Secondly, density, or close proximity of its particles, which adbere together in masses, and a specific gravity of $1 \cdot 10$, or rather higher. Tircly raway, withous lonving cither hat, it consumes et invariably the case that the quality of the $C$ is inversely invariably the case that the quality of the Cis inversely as that of the gas. The manufiturer munt nut expect to produce buth of the best quality. The process by
which the best gas is made generally lcaves the C. light, spongy, and friable, although as increase of quantity is gimed; for the simple reason, that the degree of beat and other circumstances required to form perfect must be entirely changed when gas of a high specific
gravity is to be obtained. Thus large masses of cont exgravity is to be obtained. Thus large masses of cosil exposed to a red heat io close vessels are acted upon hy slow degrecs, the exteroal portions preventiug heat fom penetrating into the interior antil most of the bias chircual and freehydrogen. the after products being light carhuretted hydrocen, carbonic oxdole, and carbonic achl gises. The residue is a carhon of a dense grimular compasition.
Coke, Sir kDw And, an caninent Eoglish legist, and inst tutional writer, n . io Norfolk, 1 b52. He was called to the bar in 15i8. Next year he begao his career of fame and practice ly being rppointed recorder of Lyons Inn. Ho was appointed recorder of Norwich in lish, and of
Loudon in 1592 . He had not, however, held the office fur a yoar, when he resigned it ou luing appointed solic-hor-general. In loat the becatas attorney-geberal. $11 e$ ous binsines to transact as a crown lawyer. lle has been suhject not unjustly to repronch for bis overbearing and insulting derneanor to the nufortanate victims of the crown prosecutions, and especially towards Sir Walter Kal-igh. Itu was a man of hanghty manner, severe spirit, and irritable temper, and he lad little toleration for anything etanding in the path of what he decmed
his duty. lunt his severity wis nut dietated hy suliserhis duty. But his eeverity wias not dictated hy suliserreisn of dames could prompt him to go out of the line of lus cluty. He was made thief-jnstice of the common ploas in 1600, ant of the king's beneh in 1613. After

Cosllqua'fions, $n$. Act of melting.

Collia'untive, $a$. (Mat.) Mniting; dinnolveut ; call.
 of the body.

Colliquefac'ifor, $n$. [From Iat, colliquefacere, to anelt. A melting or fusion of bodies iuto one mase. Collinioni. (kül-lizh'tn.) n. [Lat. collsio. See Collide Act of meeting and striking together; the meeting aad nutual striking of two or more bodies ; state of coming into violent contuct together; as, a railroud collisiom. -State of contrariety and ioterference; conflict ; clasling of will or opioion; eucounter.

Mech ) (Mech.) The impat of two bodies, one or both of direct were previously in motion. The laws of the the primesple that the sum of the momeata of the impinging bodies, estinated in a fixed direction ulong the line of motion, is not altered by the collision. Tb velocities of the bodies after impact, however, depead perfectly hard, they will nove, after impact, us one body with a velocity, and in a direction which is ascertained by dividing the algebraical sum of their previous mo menta by that of their masses. If not pertectly hard, certain conuressioo takes place on collision, und it inmediately followed by a more or less pericet restitutioo of form, accordiog to the degrees of clasticity which the bodies passess. In the case of perfectly elastic bodies, this force of restitution is equal to that of compression,
and the loss or gain in the selocity of each body wbich and the loss or gain in the velocity of each body wbicb occurred at the moment of collision or commencement
of compression, at which moment the bodles mity still be regarded as perfectly hard, is precisely repeated. In all cases of conssion the state of the centre of Eriavity whether at rest or ion in it was at rest, it remains it that state; and if it was in motion, it continues to mov in the same direction with the same velocity, notwithin the sache impact. This is the case both in respect of non-elastic and elastic bodies: aed it is a constant law, in whatever manner the bodies act on each other, and whatever be their respective natares.
Collit'igans, $n$. One who engagee in litigation with Collit'i

(Fine Arts) The term colossal is applied to any work of art reobarkable fur its extraordinary timeosions. It is, however, more applied to works in Sculpture than in
the other arts. It seems probable that $C$. statnes liad their orinion from the atterunt to astonish lay siac hat at period when the scimace of proportion and that of imitation were in their infancy. $f:$ stathes of the divinitios were common buth is Asia and Eaypt. By the description of the palace or temple attriluuted to semiramis, it abonnded with C. statues, among which was une forty Fet in height. In Bahylon we larn from Danici that the palaces wore filled with statues of imbuense size, ant in the present day the rmins of Ioliai present as with statues of extraordinary dimensions. The
Egyptianssurpassed the Asiatics in flacene giamtic monaEgyptians surpassed the Asintics in these gigantic monnments; cousidering the beantifal finisht they gave to have been the first who raised these $C$. masses; the etatnes of himself and his wife having been 30 culits in height. This example was imitatell hy him surcensors, as the cuias of Thebes sufficiently testify, the two Memnons being still in existence. The taste fior $f$ : statucs prevailed also amonz the Greeks. The statue of the Sun at Rhodes was exwcuted by Chares, a disciple of Lysijppus; and the great Phidias contributed several works of this order. The cobossus at Tarentum ly Lysipths was
no less than 40 cubits in height; and the difliculty of removiag it, rather than the moderatiua of the en queror, prevented Fabius carrying it off with the llerC. statues were frequently executed in [tilly. monmorent of this gature set up ia Romewasone placed in the capitol ly Sp. Carvilius after his vietory over the Samnites. This was suceeded is atter-fimes by maty others, of which those now on \$lute Cavallo, saill to be of Castor and Pollnx, are will known to monst prisuns.
The principal Hoban colossus was the fi: as the Suo, set up by Nero, bufore the Golden House near the site of the temple of Yenus at lenme; it was in bronze tbe work of Zenedorns, and if, as Pliny says, it was 110 feet high, it was larger than the colussus of Rbodes. The great Roman amphitheatre known as the
Colosseum is suppoed to bave luen so called hucanse it was built on the site or place of this figure. In mudern Was built on the site or place of this figure. In mudern

Colnmibin. Christupner. [The Latinized form of the 1t. Colombo; 8 . Coton.] The discoverer of A merica, a his father followed the thate of wool comber, bet, in fact, we have no definito information ahout the fumily and early life of $C$. 11 e went to sea at the ago if 14 Little is known of him till we find hime it Liston, in formed, of distuified carriage, iod unge, tall, and well formed, of dignified carriage, atod engnging matnorers (sea fig. 103). Already his hair had become quite white of his early days, Abont this time he married telepe Müois de Palcstrello, daughter of a deceused Italian Davigator. He now occupied himself in constructing maps and charts, made several voyages to tha coast of paes the bounds of existing knowledge, made a royage, in $147 \%$, to the northward of leeland. Before this time,
however, he had conceived the desinn of reaching Iodin however, he had conceived the design of reaching Iodin
by a wistward conrse. Judging from the latest ant best accounts, he give by fir too great an extension to a degree consulerably below the truth, thas preatly 110 a degree consulerably below the truth, thas greatly no-
der-estimating the earth's size. It fullowel that the At lantic paight easily be triversed. The schemte was a magnificent one; bnt it is difficult for nos now, in the advanced state of our knowledge, to luok at it in all its grandeur and boldness. He supported his views by the
anthority of Aristothe sod other ancient writers, who bad suggested that India might be reached hy going West from the lillars of Hercules; and by tradition and rumors coaceroing land to the west, and object seen fluating in the Atfantic, or cast ashore by westerty winds. Copions memoranda of all the grounds of his persuasion were fout adolong his papers. To reach
dia lyy sea was still the great problem of geograyby. offered to John IL, of Portugal to solve it by sailin westwards; and wonld most probably have prevailed npon the kiog to send ont ap expedition, had it not been for the secret counterplotting of some of the council whose duplicity, winked at by the monarch, so disfuste 1444 or 1455 ; his only compamion was his 50 n Diego, then about cleven years old, his wife having died some time previously: Thongh eatering Spric io great pos erty, he soon made friends, and got an introdnction to the king and queed. They hesitated to undertake 80 great an euterprise, and several councils reported unfa-
vorably; still C. persevered io new applications, and for Vorably; still C. peraevered io new applications, and for
seven years was kept io a jainfol etate of sa-pense A length, aftera last trial, in Fehruary, 1493, lue left the reaidence of the conrt, and set out on hisway to france Two of hia frieuds got an immediate interview with the queea-overcame her scraplea-and $C$, was bronglat back. Isabella had offered to pledge her jewela, bet the king was afterwards prevailed upon to furnisb the greater part of the funds, $C$. himsulf undertaking an etghth, and getting the same part of the profits. He was to hatve oae-eighth of all metals, gems, and merchaudire, the of fice of admiral, with descent of title, and to ba Ficeroy and governor-general of tha aew lands. The artilles of Ancnst $3,1+92$, the expedition sailed from Palos, pear Angnst $3,1+92$, the expedition salled from Palos, near
Moguer on the Tinto ; it consisted of three small vessels Moguer on the finto: it consisted of three smath ressels beeo procured with the utmost difficulty, owing to the general drad of the voyage. Tha celebrated brothen Yinzon commanded the two amaller vessels, of about fifty tons each, named the Pint a aod Nina; the admiral, the Santa Maria. The only difficulty encoontered was the mutinous tendency of the crews, excited by their terrors. C. repressed these with extraordinary tact; be
was, besiles, a skilful eailor, and had helps which a fuw was, besiles, a skilful eailor, and had helps which a few years befure did not exist. The compass had been re-
ceiviog more attention. and the astrolabe an inatrument like our sextaot, hal been lately intruduced.- Sittio on the high poop of his vessel, at 10 o'clock on the night of Oct. $11,1+92$, gazing earpestly ahead $C$ plainly saw moving lights nuon some laod. Four honrs of most ex citing suspease followed. At 2 A. M., Rodrigo Triana, sailor in the Pinta, which wits a little in advance, saw the land itself. Dawn resealed a lovely island-Guamithaoi, or San Salvador, one of the Buhamas. Ile after wards discevered Cuba and Hayti : and deeming all these portions of Asia,- a delnsion uoder which he lalored till his latest hour,- be called the inbalitnots Indians a name which becane general before the truth wis
known. The discovery pruduced an extraordinary semsnown. The discovery pruduced an extraordinary sen and in every part of $\mathrm{S}_{\text {pain, with the highest honor. }}$ On Sept. 25, 2493 be gailed from Cadiz with a fleet of

Fig. 655. - comet op 1519.
any nuclens whatever, and others have the luminou head without any tail appended to it. The tail io often of great length; th, th of the C : of 1858 , calle-l Dowati
C., veing about $50,000,000$ pilles in length, while that of the comet of I8 $\$ 3$, one of the most brilliant ever of served, was quite three times as long. These bodies travel round the sun io the path of au ellipse, having the and as one of its foci; or in " paratholic curve. The are only seen when they are at their perihelinn, nat the tail is always turnerl away from the sun. C: differ considerably from each wther in form, some being withont any tail, ns bas been said; bot they generally have a lirond fumanoos tal, slightly curved in slape, which trails be
hind the head. They were sopposed by the ancients to prornosticate some diastrous erust byil they were con sidered to le within the region of the at mosphere that surronnds the earth. Tycho Brahe proved howevar that they were sitnated beyond the earth's orbit, and Newtun showed that they iravelled in elliptich orbits of great eccentricity, the corvature of which did not differ much from that of a parabola. Considering this
to be the case, and assuming the path of the $C$. of $118+2$ to be the case, and assuming the path of the C. of In st
to be paraholic in form, the astronomer Ilathey calculat to be paratiolic in ferm, the astronomer llatley calculat
ed its orbit from Newton's observations, and predieted its re-appoarance about the end of 17.58 or the early part of 1759 , making allowances for the disturbing action of the plapot Jupiter. Halley's prediction was verified
When it reappeared, it was first olugerved on Cluristnan day 15 is by is Geroan astrunomer, and it passed it pervhelion in Misch, 1759 , thus ndding to Halley's fatac He an astronomer, und confirming the theory that Nam ton had advanced rexpecting the revolution of thes bodies. This C C , now known Hs Hatley's $C$, which had been notuod in $1378,1456,1531,1607,1682$, and 1754 appeartol again in 38.35 , and, Assmbing 76 years to be the mean tume that clapsis between its successivo appear athers nt its perihelton, it will be seen again in 1910 The comots of Enreke, De Vico, Bicli, and Faye no Bromen, have also reappeared at the time calculated for their return to their perihelion, the last in May, 1868 olutiond have been verified liy observation, the first that

 of $\mid 1 i=11$, which is mupomed to he the one that appeared in the year $4+$ D. c., just beforo the death of Julins Ca hir, thin from which Newton derived the data which lei or purabulic orbits, was ond of the most remarkinble that hus eyer lieen obarved. it presented an uppearanco if surpaseing sptombor: its tail npperved tos extend over of are of tho, and it npproached nearer to the bun tban my that lave yue been noticel, except the $C$ of 14.4, whiri and lintre. It is beyond the beapils of possmbility to ktate how many comets thete aro rovolving nround the bon, which is the centre of our molnr system: but it may
be sulh that mors than two lumdred have lieen obsurvel up to the prosent time, the orbits of which lanve been calculaterl. Of those, nowut fifty revolve in clligtic or bita, and wix at leart have heen observed at moveral she cessive appearances nt their perihelion. With reapect

Common Law, $n$. This term, somewhat ambiguons, is used in various senses, according to the otyjects with sometimes from the statute law, sometimes from the canou law, sometimes from the mercantile law, and freqneatly from equity. Many use it to designate simply a law commom to all the conutry. The English, whis is the base of the American common law in all the States evcept Loniniana, traces its origin to the early usages and customs of the ahoriginal Britons, and was necessarily angmented, in different ages, by the ndmixture of some of the laws and usages of the Romana, wh Picts, the Saxeas, the Danes, and the Sord themselves over the country. . The Enclish fow ${ }^{\circ}$ says Hallem (Mid, Ages, ii. 405 ), " becoming at law, Bays fallan an English language." - The cummon law mixed as the Engisiples, nsiges, and rules of action, applicable to the government and secnrity of persou and property, which do aut rest for their authority upon any express or positive declaration of the will of the legislature. Io uany of the States, the $C$. law and the statutes of England in force in the colony at the time of its independence, are by the state cuastitnt. Hence clared to be the law of the State butil repentect He upo when a question in the courts of one State such 1 zw i the laws of a sister State, if no promat the common law, as it existed at the time of the separation of this law, astry frou Eagland, prevails in such State. His wrath, sud so concorporate." - Cteveland.
Concorporation, $n$. Union in one mass; close adCon'eonrse, n. [Er. concours; Lat. concursus - con, and curro, cursum, to rnn.] A moving, flowigg, or ranmiog tugether; contluence.
-A meetiog; an asseobly of persons; вe assembluge of thiogs; ass, a concourse of people.

The noise and husy concource of the mart." - Dryden.
Conerenie', v, a. [From Lat, con, and creare, to cre. To create at one and the same time.
God did conercate grace with Adam." - Bp. Taytor.
Con'cremess, ク. [Lat. concrementum. Sce Cuscrete.] A mass formed by concretion ; \& coltection of spoutaneous growth; as, the "concrement on a pebible or tlint." Coneres'eence, $\pi$. [Lat. concrescentia-con. und crescn, to grow.] Growth or increase; act of growing by sjontaneons onion, or the coslescence of sepratate pirticles.
Concrescible, $a$. Capable of congelation or conConeres'eive, $a$. Growiog spentaocously together, or into union.
Con'erete, $a$. [Lat concretus, from coneresen,] Vniter mass; cengealed; congartated; ins, a concrete nasss or matter. (Logic.) A term is so called wheo the notion of an attribnte is resardeel in conjunction with the olject that fornished the notion: ns fomlish, or fiol. When the attribute is regarded io itself, it is called an abstract term ; as folly.

A mass formed by concretion: a compound.
(Masonry.) A haul mass furmed ly mixing lime, sand, (Masonry.) A hath mass formed by miximp lime, sand, peblites,
Concrete', v. $n$. To grow tegether ; to unite or conlesce, as separate particles, into a mass or solid body, chiefly by spontaneons coliesion, or other natural process. $-v . \alpha$. To form into a mass by the cobesion or coalescence of separate particles.
Conerefe'ty, adv. I
Conerese'ness. $n$. State of being concrete; coagnlation.
Concre'tion, $n$. Act or process of conereting ; state of bemp concreted. - A mass concreted ; a clut; a lump. (Med.) A calculas or solid enbatance formed withiu
the body. See Catecles. Coneretionary, $a$. Conere'tive, $a$. Cansing to concrete: having power to prodnce cuacretion; teuding to form a solid mass from separate prarticies.
Conere'ively, aty. In a concretive manner.
Conenbinaey, $n$. The practice of concnbinage; fornication.
Conen'binnse, $n$. [Fr. Sce Conccome.] The ntate or practice of living together as hosbaod and wife withon (Hist.) Iu
(Hist.) la enrly times this was a common practice; and men of memas had frequently, lesines severa
wives, a number of concnbines, as we read of in the Old Testament. Thy fatter did not enjoy the sanme riphts its a wifo, and cond be repudiated and dismissed at any time. Ihith unoug the Greeks and Romans concubinage was illowed; lunt it was nut legally sanctioned among the latter autil the time of Augustus. By the Lex

confes Nion, n. Act of confessiog; that which ie confessed. - Acknowledgrment of a crime or fault; open declaration of gailt. Finure, debi, cression - Disclosure of sins or fanle 20 a prieat. A formulary of articlee of laith; a creed.
( Theol.) The verhal nekoowledgment which a penitent makes of his sins to (iod, or to a fellow-creature. Among the Jewe, it was the custom on the numual feast of expiation for the high-pricat to make confeasion of sine to God, in the name of the whole peopule. Besithes this general confession, the Jows were eflument. if their sins were a breach of the first table of the law. to make confresion of them to crod; hut vielations of the emeand table were to be acknowledgel to their brefarea. Con fersion seems to hive heed early introduced into the Christinn clurch; but at first it took place openy, nud selves or bern puilty of any flagrunt offace, and wro desirons of leing re-almitted into the tharch. The practice of prisate or auricular confession bectme to have griwhally crent in alout the Gth century ; and lanocent IIL., in the fous th Lateras conucil (1215), mate it ollifgatery on every ndilt person to confens hie siate to a jeriest at lenst once a year. The jurron confessiog is alfowed to conceal no sin-at lenet the mortat sin-that he renimbers to lave committed, and not to have aiready confessed, and the father conflemar is bound to perpetual becrecy. Confersion ohtains alen in the latheran church, but with this difference, that, while in the formur case it is oflipatery. bolntions.

chnrcb. ID the selection of its minister, an indepeudent charch is not restricted to a spectar chass prepared fur the office; religious exhortation is permitted and enceuraged in all those who, having gitts suppropriate, feel prompted to use them. Congregatimnalists, on the coudination of their ministers. The only valid call to the pasdorate is beld to be an invitation to that "nfie ly lyat individual church; and to s person so invited, no license nor ordinstion is considered requisite, in order to conir-r antthority to preach or to adnuinister the sur ramons,
after this election by an indivilual church, an ordination by ministers of the neighboring clurches is peneral, when the newly chosen pastor makes a professiun of his belief, snd receives fraterasl recognition frum the other pastors present. The dectrines of the Congregational
churches ure almost identical with those embodied in the Articles of the $Y_{\text {reslogterian }}$ Church. interpretel according to their Calvinistic meaging. Ereryind cburch has its own creed and arte charches is distin-
theless the Congregational boily of churcher theished by a singalar degree of uniformaty it faith and gractice. As to the origin of Iutlepeadency, it is probable that some cou venticles were secretlitand soon after the accession of Elizalh : but the first promineut advocate of Congregational priuciples appeared in 1580, in the person of Robert Brown. (See Bnownisre.) His followers rapidy increased; so much so indeed, that an Act of parlianeent was passed in 1593 , specially directed against them. They were
treated with great riger, and several suffered martyrdeated with great riger, and bererar suminions in the reign of Queen Elizabeth. Many fled to the more tolerant Contiaent, and churches were established at Amsterdam, Leyden, and
other parts; Mr. Robinson, who wis pastur of the charch at Leyden, being frequently regarded as the real fuunder of Congregationdismu, as he modified many of the principles of the Brownists. Mr. Jncob, oue of the exiles, gational to Eugland in 1616, and estabe ishorg Longliagent, they enjoyed a season of comparative freellom, meetiag openly, and gatheriog strencth; and wheu
Cromwell (himself an Independent) assomed suprenn anthority, their principles obtained a pitent recounition and a geoeral toleration syas in a great measure effected With the Restoration, however, their prosperity catme
to an enil, an 1 by tho Act of Uniformity io 1660 ationt 2,000 non-conformiug clergymen were excludel from their places in tbe Church. The Revolutivn of 168 agsin broug by the Toleration Act of the followiag year Yet, for some time after this, Congregationalism diji no flonrish; and iodeed it was not till the revival of re
ligion, excited by the labors of Wesley and Whitfield that it again began to prosper; and since that time it bas gone on. greatly increasiog the number of its allhe rents. In 1869, they had in Great Britain, and its depen dencies, 3.442 charches, with 1,852 out-stations and mis sions: 2,893 ministers: 75 assuciations and unions: and
30 collegus ani institutes. - The Plymonth and M..sez-
 cy Congregational pilgrims in 1620 add 15228 : and others a few years afterwards, in Massachusette and Conpecticut. Comgregationalism give Ner velopment of the New Encland charches, and the teur iogs of their pastors, gave chagregatiooalism sbh-tag
tialty its form. "From the earljest settlement of N. tially its form. "From the earliest settlement of Noty
Bngland, there was a defuinite but peculiar relation be-
ween the churches and the State. It wis neither that Which the state rulns the Chumeh, nor that io whine ing of the twes INeusheps wase meonkerated with view to aluhty to maintain a sottled moisery, wal to the convenichice of the people in attending public wor hip. I'rovision was unate lyy law hor thr suyphirt of pasturs, nut for all necessary expenses. Conjusra'ional, $a$. Relating to conjogation
Conjun,ial, u. [Lat. conjugialw, equiv, tu comjugalis.]
'osjunct', a. [Lat. conjunctus; pp. of conjungere]
Conjuasct, concurrent; nnited. (k.)
Conjume'tion, $n$. [Lat. conjuncten, from conyuno, com junctus; Fr. ongouction. See Coxjons.] Act of joining
together; state of being joiged or united; anion ; con nection; association; congreos.
(Gram.) An indeclinable word or particle which serves to nuite words, seatenced, or clanses of a sebopon ono munher: ths, "Day euds, and night begine Willian and John Jeara latits: Charles and Jabses car ried tho basket between them. In the first sentence pound seutunce. The same is true is the second - the pound sentunce. The same is true in the second- the "Juhn learns Liatin." ln the third ecntence, urd conbects only the two words, "Clarles" and "James," as it cannut be affirmed of either of them alone that lie "car ried the basket?" In most cases, however, it cat be shown that, logicatly at least, two affirmations are involved, und that the conjunction really connects the affirmatinos. It is not easy to distingusis C. from ad verlis. In fict, $\subset$ : were all originally other parts of spuech; and the greater part of them are still renlly ad verbs, and owe their coojanctive effect to their sigaifibeen tho oricinal meaning, we duw attent only to the cunjunctive fffect; or is is shorteped furm of the pro nomiush adjective ofther; and nor is or with the the protive prefixed. in strich a sentence $n s$, "I believe that yon are wrong." that is tho demonstrative prououn equixilent to - I believe this, viz., "yon are wrong," This is cearly seen ith the corresponding words in other latigaiges: Ger, duss, Fr. que, Lat, quod (for the relatives werd originally demonstrative promouns). All the res might be called Adverbial $C$, or Cunjunctive Advertis Ex., "IIe is iminstriuns: therefore he is happy " - that is, "he is happy for thut." This adverb, or ndvertial phrase, exprossive of the cause of the happiness, by rehis the effict of connecting the two nesertions in the mind. Aguin, "Thaecting messenger arrived while be wa sjeaking.' IIere white is equivalent to at the time af which (he wits speuking). As atn allverbial plisise, this simply indicates the time of the act of "nrriving ;" bat as it also expresser that the speaking was guing on a the wame time, it thus conjoins the two assertions.
(-1strom.) When two beavenly bodies have the sume longiturle or right ascension (sea Ascession), they ar said to be in $C$ If they also luid the satae declination. or latituite, N. or S. of the celestial equator, tho neare heaventy bonly would upparintly cover the dine of ihut Wheme bet wecen the carth mand the sun, it is yad tis in in $C$. with the lattur : but it is sand to lee in oppesition to it when the carth cones between tho body in quention ant the sun. Hevecntric $C$ is the $C$. of two horvanly bodies Hs viewad from the oarth; but when buliocentric e: Is spoksh of, the $f:$ is undrastood to be consid.red as if viswel from the sun. True $C$ : is the observation at the earti's surlive redised to what it would bs if witnessed form the cuntro of the earth.
'onsinas'tiossal, $a$. That relateq to a conjunction.
 tolnate mombrane, fhat lines the intirnal sujuricies of

 from it. Lathammation of this menbrane is called onh 'onjusse'tive, $a$, Chanely milted: connecting to gethor; Anlyumetive; uniting; servius to unite. (k.)

anod. (Dram.) That malification of the virh which
 'onjowc'tively, ade. la union or eombunction. 'minjanc'ti criess. $n$. Tho quality of Jolning or
 junctura, a jolning, from jungo, junctus, to join.] A
joining togetber; a combination, or maion; connection
o perceive the conjunctures of letters in words, " Holden, A combinatios of impurtant events, or critical circum-- I never

## CONN

CONS
CONN
-r. n. To join, unite, or cohere together - To lave a
Consiect'ed, p, a. Linkell together; mnitel.
Conseet ieast, one of the smallent of the E . States, mind
 E. R. Is, W. N. Y, nud $x$. Long laland sinutil. Length E. to W. 90 m.. atud its average breadth abt, 50 m . $4,730 \mathrm{sy} . \mathrm{m}$.-Desc. Surface undulating, often monntainons; some of the penks are 1, tho ft . abv, sea, ant ones, 3no. The Green M. enter by the X. We. from and, ran in detached enumemes, thromgh the western part
of the state. These mountains, the Tateet or fireenof the state. These monatains, the the N , and a ridge E. of the Connecticnt River that appears to he a cur tinuation of the White Meuntains of Nuw llumphire are of inconsiderable height. Mast of the shate is dratined by 3 principal rivers with their branches, the Connecticnt in the central, the Honsatuaic in the western, and the Thames in the eastern pirts. Be-sithes these, there are variuus amall stremms which flow into Lomp 1shad Sounl. Of these, the Quint prack, which rise between Farmington and New Britain, anf cmpthes into
N. Haven harbor, is the Laracest, and the only due which N. Naven harbor, is the hrigest, and the only une which ley of $C$ is alluvial nod diluvial, and embrnces the most fertile and the poorest land in the state. The alluvinl of the $C$. and Farmington River valleys is a richt lonm seldom eqnalled for continunas tillage and productive-
pess. Mnch of the remainder is it diluvial, lyath, samily ness. Mnch of the remainder is at dilnvial, lyigh, s:any
or gravelly soil, especially towarls New lliven, nul unor gravelly soil, especially towarals new miven, rum m
prodnctive, mims artificially fertilized. The 8 ction of the State watered by the Honsatooic River, extending into New York and M.assachusetts, is wry lroken and mountainous; the craggy nountains atiod affine stifl
covered with woods, but yet large portions aff excellent pasturage for cattle, sheep, and hornes. The whole lent pasturage for cattle, shemp, and hornes. tive formation, and diffenit of cultivation. Sluch of it is suitable for graziog, but it is the most valuable for the production of fruit and vegetables. - (Tim. The clicold is expericnced at different scasons; but the sky is usnally serene, and the country healthy. Ohservations cevering a period of 20 years show the mean tompera-
ture in wiuter to lie $29.92^{\circ}$; summer, $69.27^{\circ}$; ramge for ture in wiuter to he $29.92^{\circ}$ : summer, $69.20^{\circ}$; range for
any mooth, $55.80^{\circ}$. - Min. $C$. is rich in mineris re any mooth, $55.80^{\circ}$. Min. $C$. is rich in mineral re-
sonrces. Gold has lieen found in Middlesex connty. and silver is obtained from the argentiferous lend ore of the Siddletuwn mines, which are exteosiscly worked. The copper wines of Bristol are manong the richest in the $l$ States. Lead occurs in different localities, Irui
mined at Salisbury. Bismuth is found, chiefly at Mul roe; and cobalt nad nickel are the objects of evtensiv mining operations near the town of Chatham. Therear also otber precions or rare metals, such as Carysobery Beryl, Colnmbite, \&c.- Mineral Wuters. Thure is mineral spring at Stafford, 24 m . from llartford, which has obtaned more celebrity than any one in New Eng land. Its principal ingredients are irun and carbonic acid. It, consiquently, belongs to the class of acidulous chalybeates, -Agric. The pridecipal protucts of ire market producte, tobacco, wool, and 1rish Iwtiatues. The offici.1 statistics give the following fisneres for the crop) of 1867 and that of $1 \times 80$. (For statistics of $18 i 0$ see p .
708,1 The reader will olmerve that the usnal farm crops present but little variation, comparing the three
severail returos for the years 1867,1870 , and $18 \times 0$, but that the cultivation of tobacco has greatly iosreased. In this, C ranks ninth among her sister Stistes.

| Products. | Amouzut of crop, 1867. | Amount of crop. 1ven). | Total acre age. 1880, |

(Phalo.) C is che recoguition by the mind of its own scts. While it is thus a conprehensive tern tor the complement of all our ouental energies, it, yevertheless, so elementiry notion more simple than itself. Bat while $C$. canonot logically be defined, it nay still be philosophically analyzal. The forms uoder which this condition of all thinking operates, are: $I$ know that $I$ know, $I$ know that $I$ fed, and $I$ knuw that I desire; or, in other words, $I$ am conscious that I koow, feel, and desire. And white this is so, the act necessarily iovolves, 1, a knowng mitit 2, a kuown It aject; 3, a recogution by the miongly appears that $e$ and koowledse motually involve each other; they are oot opposed as really diverse. It is somewhat remarkable, that a term
in all ways so importaut and convenjent, shonld lave escaped the subtile Greeks aud the rhetorical Latins, und that it thould have heen reserved fur Descartes, a Frenchman, to introduce the turm consciontia, or consciousaess, in its modern signification. An instance or two of the midera use of the word may, no doubt, be found in Quintilian snd the Latio fathers; but no consistent adoption of it is to be met with betore the time jhet sperined. Among the rowang, if some circumstance, such a kuowl edge was called conscientia, (or con-scio,) knmpledge together with; but, except this, the term was always employed io a moral sense, ns equivalcat to our word comscience. The general conditions that attach to $C$. io its
muderu acceptation, are olvions and palpable: 1. That the koowlelgo which it implies is actual, and not merely poteatial. For example, if I say of my frieml that he knows the ethape of tue dome of the Capitol in
Washiogtom, that it is round, and eot square, Inean that he is not conscions of the fact at the present mo-
ment, but that he may be rendered conscions of it hy meat, hat that he may be rebored corcmastance. Whe are, in trath, conscions only of the preseat. 2. The are, in trath, cousciuns onle of tant. Thus, while I am conscious of the dome of \&
Paul' while $I$ look at it, I am anconscions of it when it is out of my mind, having to rassack the arcana of memory to bring it ap into coasciousness as often as 1 wish to recall it. Again, in the third phace, I am ouly canscioss in so far as I am conscious of some definite object as contrasted either with no object, or with another ob
ject different from the present oue in its qualities an ject different from the present oue in its qualities and
modifications. Tlus, suppose I an conscions of the modifications. Thus, sappose I am conscions of the
desk at which I write, 1 amonly so as takiog the present desk at which I write, I am only su as takiog the present
desk in coatrast with some other supposable desk, such desk in coatrast with some other supposable desk, such at the same time. In the fourth place, there is always at the same time. tion or negation of one thing being or not being, havlog or wautiog the qualifications of another. We cannot, in truth, discriminate without jndging; so that this fourth condition might stind as a corollary to the third.
Every act of miod, in trath, implies a juigment, us every Every act of miod, in truth, implies a jadgment, us every
act of consciousoess juplies an act of affirmation or negation. The fifth uodentable ac
memory; for I caunot be conscivas of an object withont discrimioating it from another state of mind to which
the present one was only a faccessful phenomenon. 1 the present one was only a eaccessful phenumenon. I
must distioguish all the separate acts of conscionsness, must distioguish alt the separate acts of conscionsuess, as I can ouly discriminate them by the belp of judsment. As the fourth coudition of $C$, this one holds the position of being a secend corollary to the third. Leibnitz truly has remarked, in his Vinvequx Essnis (iib) ii. c. 27, s. 13), that "if our immeliate interaul experience is not certain, there cau be no truth of fact of which we caa be assured." All specnlators agree io this. Woth
soeptical and domatical. Bnt pot only is conscionsuess soeptical and dogmatical. Bat not only is conscionsuess
the evideaceand authority of ull legitimato speculation; the evideace and authority of ull legitimatospecculation;
it is lisewise the source aod spriag from which it flows. it is like wise the source aod spriag from which it flows. As the criterivo of philosophy, it must he clear and nu-
adulterated; and heace, there emergo three great laws adulterated: and heoce, there emergo three great laws
that regulate its legitimate development. These are : 1 , that it be charged with no fact but what is simple and altimate $; 2$, that all the facts ascribed to consciousness be taken withoot reserve in coming to any conclneien; and 3 , that aothing but the facts, or what these dataimply, be accepted as legitimate in any process of inquiry. As one illustration of the fertility of accepting or of rejecting theseleading lawa may be mentioned the circumstance, that on the duality or unity of the
first fact of coosciousoess haogs altogether the entire first fact of cooscionsoess haogs altogether the entire
system of speculation which any noguirer may adupt. system of speculation which any soquirer may adopt.
If, in saying that $I$ perceive a stone, I do Dot recognize that there are two independent onfietis in this act, my perceiving mind, and the same which perrenteat existences, but maintain, with Berkeley, Fichte, and Ferrier, that what seems a a sone io not reaily a stone, hut only a mode of my mind or of
some other mind, thee I deny the duality of the subatances, and assert their unity. And if I do so, I deay

C'onsterna'tions, $n$. [Fr., from Lat. eomsternatio, from] consternn, consternatus - Con, sterno, to spremi int, to eltend, to throw down, from the root ster, whence G stonennymi, to spresud or stretch out; sansk, stri] d prostrution of the mind; a station the factulties, and incapacitates a per*on for con sultation and execution ; hurror; amazeuent; astonislsment: surprise; woudor; perturbation.
Convipaite, v. a. [Lut. constipn, onnstipatus - con anil stipo, to compress; allied to Gr. steabe, to truad o etamp ou.] To crowd; to thicken; to condener; ; to
cram iato a arrow compass; to stop by filling a pussag "It may, hy amassiog, cooliog, ad oont them ioto raí. " - Ruy.
-To make or reader custive; as, a constipated coudition of
the bowels.
Constipations, n. Act of constipating; condensit tion;
(Mrd.) C., or costiveness, is a torpitude or eluggishness of the bowels, vccasioned by an excussive action of thatasorbcots of the bowels, or defective secretion of the juices of the intestines, by which the faeces becoun testioes, (See Dramsiov.) it arises most frequently from a deficieacy or vitiated secretion of the bile, which is the aatural stimulus of the bowels. Sedentary hatits predispuse to $C$, as dues also the use of certatio kianls of linol. Whea severe and obstinate, it gives rise to influmation of the buw cls, and maty soon prove fatal.
The treatmeat consists in moving the bowels by means of purgatives, or injections of tepid water, then restor of purgatives, or injectioas of tepid water, then restor ercise ia the open air, sea-bathing, aad the ase of food of a laxative natnre; as brown bread, greeo vegetables, \&c

Con(ractible, $a$. Capable of contraction.
Coniractiblencos. $n$. Quality of suffering conCoutristile, $a$. [Fr.] Tending to contract; having the power of contracting, as living fibres:
"The arteries are elastio tubes, eadued with a coneractita force."
Coatraciil'ity . $n$. Quality of being contractile; herent property by which bodies cootract or shriok in life, of shorteniog thenselves in a pecnliar manner: int life, of shorteniog themsetves in a pechiar mands of
it is uspally observed in nuscular and some kinds of it is uspally obsersed in mascular and some series of cella, as in the $\boldsymbol{H} y d r a$ polspe.
Contracilion, $n$. [Fr.; from Lat, contractio.] Act or contracting or drawing in quantity or extent; ablureviation; curtailment.
"The maia parts of the poem.,$\cdots$ no traoslator can prejudice,
but hy omistioos or contractions. -- Pope.
State of being contracted narrowed, lessened, or shrivelled; as, contraction of the etomach. (Opposed to ditaelatim.)
(Gram.)
(Gram.) The shortening of a word by the omission of a letter or *yllable. The Greek laogunge abounds with contractions, whicb bave been adopted chiplly to nvoid a harshaess in the pronunciation arising from the concurreace of two vowels in two successive syllables gether are usu.ally contracted into a diphthong. This is gether are sraper when they are contracted without change into a diphthoog; improper, when, is tho coochangen a vowel or diphthing of a different sound is subetitutcd. Elision t.kes place when two vowels at the end of one and at the begianing of another word comected its place being marked hy an appostrmphe placed over the consonant which is left. This takes place chiefly with the poets. Crasis is that kiad of contraction in which
two words coalesce ioto one, and are accented as one, two words coalesce ioto
withont any elision. Io synizesfs two vowele are contracted inta one sound - not in writing, hit in proman ciatioo. In the Siddile Ages, before the intredution of
priating, anmerons contractions were regnrted to for the priating. of abmeroeviatiog the habor of transcription.
parpose of atbreviatiog (Math.) The process of abridging any problem.
(Med.) Contractura, a state of permaneut rigidity and progressive atrophy of tho flexor mascles. which pre vents the motions of extencion beyond a cortain limit The affected muscles form hard cords benenth the skin Oo dissection, they are funod to be converted int, tenil-

Con'sent, n. [O. Fr. onnvent; Fr. mutent; Lat. conventes, frohl conerain] A commanity of fursons devent of Ursolines.

With all his convent, "Thenourably reccived him."-Shoke, -An abbey; a monastery; in nuauery; a momastic heuse as, the comvent of Port-Koynl.
Convest, io Lotisiana, n post-office of St. James co.
C'on vent'ieal, a. Pertainiag, or relating, to a cob-
Convent'iele, n. [Lat. cmiventicnlum, dim. of comventus.] A minor assembly or mecturg.
(Eccl. Hist.) A cabal, or secret nssembly, of a part of of an abbut. It is sain by souse to lave been first mpplied in Eugland to the schools of Wieklitfe, mid has sioce been ased by way of reproach for those religious
assemblies which dissent from the established cherch assemblies which dissent from the established cherch
of Eughand. In $166 t$. What is called the C. Act was passed, decreeing that if nuy person or persons above 16 years of age were present at any meetiog for worship
different frum the Church of England, where there should he five persons more than the hoasehold, they should, for the fist offence, suther three oronths inswas to be doubled; aud for the third, they were to be
lanished to America, or pay $£ 100(\leqslant, 500)$; aud if thes hanished to America, or pay $£ 100$ ( $\$ 300$ ); aud if they
returned, to suffcr death. It was pot till 1812 that the C. Act was repealed by 22 Geo. 111. c. 112 .

A meeting of dissenters from the Established Cliorch of Enghand, for religions worship, or the place where they neet :-generally used in a cuntemptuous seose.

Who far from steeples and their sucred soond,
In lields.ther sulten conventicles foued. "-Uryden.
-A secret assebibly ; as, a conventicle of couspirators.
Ar, ath of you had laid your beads ragether,
(My self had notice of your conventicles.). -Shaka.
Convent'ieler, $n$. One who beloogs to a religious
Conven'tion, r. [Fr., from Lat. conerntion, from conwrina] Act of coming together; a meetiog; union ; coalition. " The conventions
-Agreoment: arhitrary custom ; conventiooality; as, the conventions of society.
-A temporary agreument or treaty. See Treatr.
-An assembly met for the furtherance of somso civil, political. or reli, ions porpose.
(Amer. Hist.) At the commencement of the Revolntinn, the terin was applied to those bodies which assumbed the powers previousiy exercisen by the colonial governmeot, and expecinty to thuse by which the state term is ont ouly applied to delegated bodies, apecially term is ont only appliod to delegsted bodies, apecially latores: but also to voluntary asserablies of delegntes having some change of legislation or pelicy in view. It is also applied to delegated bodies assembled as the representatives of parties, especially for nomination to office. (Eng. Hixt) A term applied to two extraordinary as-
semblies of the English parliament. The first was Eurumoned in 1660 , and having completed the work of the Restoration, was dissolved hy Charleq 1I. during the
same year. The second had for its object the debsrring onme year. The second had for its object the debsrring of Janes iI. from the throtte (1689), ant

Ere the King 's crown go down there are crown
(French Hist.) The name of the politicsl assembl which sneceeded the Legislative Assembly (Assinable Nationale). Sept. 21, 1792. The C. abolished royalty nod proclaimed the republic, sept. 22; condemoed Loufs X YI. to death, without appeal, by a majurity of 11 out of 721 votes, Jan. 20, 1733; declared war with England, IIolland,
and spain, Feb. 1: established the revolutionary tribuand, March 10 ; decreed the formation of the comnittee of public safety, April 6; allowesl the arrest of the Girondius, Juoe 2; completed the constitution, but euspended its activity, Aug. 10; decreed a noiversai leyy for the Oct. 16; appointed a committee, with Sieyes at its head, to frime a sevood constitution, April 19, 1594; received antul alopted that constitution, Jnoe 23; ordered the anrest of Robespierre. July 27 ; suppressed the Jacobins.
Nov. 12 ; was successfully deferuled by Bonaparte against Nov. 12; was successfully defemled by Bonaparte against
the sections of Puris, 0ct. 5,1795 ; handed over the govt. the sections of Puris, 0ct. 5, 1795; handed over the govt. to the Directory and the Council of 500, aod finally adjournwi, O:t. 26 , after having heen io session 3 years and 35 days, and passed 8,310 decrees. Many violen tyranoical, eveo atrocious acts are charged to the o
but it is to be said also that in critical eniergencies that assemuly displayed sn nuequalled eoergy; that it maintained the unity of France, anal saved the country when invaded hy foreigo arroies. France is indebted to it for many of her best institutions, such as the Grand-lirve of the N itional Debt: the Normal School; the Conservatory of Arts and Trades, \&c.
Conven'tional, $a$. Relating to a ennvention : stipnAred, formed by agreement; as, convatemai services. -Arising ont of cuatom or tacit agrpempnt: sulbscribed to by nsage; as, conventional rules of society, conventional Cozven'tio
Cozt ren'tionalism, $n$. That which Is received or
establish by pipular usage, or tacit agreement; as, a cortain phrase is a craventionalism. Conven'tionalist, $n$. One who adberes to the rulea and provisions of a contuntion. - One who is attached
to conventionalim; a formal, punctilions perzon.
Conventional'itiy, $n$. State of being conventional;
a conventional term, pribciple, or custom; adherence to Tonventiounlize, r.a. Tomake conventional. tonsestionaliy, ude. In a eet or convontional tonven'tionary, $a$. Acting upon contract; settled by stipulatons: as, conrentronary twants, Jolinzon. Conven'tioner, n. A member of $n$ convention or Conventionist, $n$. One who enters inte an agreefont on contract. [Fr. comentuel.] Monastic; belong. ing to st collent; ns, contentual priors.

One who lives in it convent ; in monk or nun.
Consergre', wi. [L. Lat. convergo - con, and wrgo,
bewd, turn, or indine.] To turn or bud together t wards the sume point: to tend to one nud the stme point or object; to incline and approach nearer together. The tower stics, they alf at once converge
High to the crow of heasen. "- Thomon.

## Convergeme. Convergenes, $n$. Thequality of

 Convererigent. $a$. Tunding to one point or olject ; npproselmif cach other us they proceed; as, concergent lines. - Cunvergingsaid to bo $C$. when, however many of its terms may lis kaid to be $C$ when, however miny of its terms may
auded tugether, the sum never exceesls, nomerically kome fante qunntity. On the other hatod, it is kaid to be diergent whet, hidding suthicient aumber of terms, a bum can be ebtained which monerically exceeds any given finite quantity, however great. A series is not necessarily $C:$ when its remms continually decrease in
mangatade; for instane, the series $1+1 / 2+1 / a+1 /$, dc., is mageitude; for instunee, the series $1+1 / 2+1 / a+1 / 2$ de., is
divergent. If, howewer, besides decreasing numerically, divergent. If, howeser, besides decreasithg numerically,
the terons have alternute sogns, the series will be $C$ :
the terms hnvelis. \&c.is $C$
thus, $1=1 / 3-1,1+$. $B o t$.) Applied in describ
Conver'sent-ncrved, $a$. (Bot.) Applied in describ-
ing the suatron of leaves, to cases where the ribs form a carve and meet nt a goint, as in P'luntago tanceatota. Conver'ginst, $p, a$. Tewding to one point, mark, object; approteching each other, as lines extended; de creasing in magnitade; tendiag to a certain limit.
© rays. (Oplics.) Rays tesding to a common focus.

## Consersilit. Sce Conkerkit SElies.

Conversiable, $a$. [Sce Cosveree.] Disposed to confree in dixconrse.
Consersiableness, $n$. Quslity of being socisile and compersuble : fluency of taik.
Convers'ably, udv. In n conversable mnner.
Con'versinime. Con'versaney, $n$. State of being finviliar or conversant. Coniversin 150, is tuthi of S. Jtaly, 20 m . from Bari ; Con'versant, $a$. [It. comversante.] Well nequainted with; versed in; skiltul; proficient; - generally for-
lowed by with. "He uses the differen
with them all."-Pope
Hith them all."-Pope. well acquaioted by fruqueat assuciation.
-Relating to; concerning: - preceding about.

- Discretion considered. .. as conversant about worldly affairs.

Conver'sant. $n$. One who converses. (n.)
Con'versantiy, adt. In a converoant or intimate manner. Conversa'tion, n. [Pr.; Lat. conversath, from con mate fellowship ; commerce ; easy intercourse.
"Freodom of habitades, and conversation with the best company.
Frmiliar discourse : interchange of idens; colloyny; easy talk letween two or bore persons. The pleasure 8 th advantages to be derived from C. are very manifest view it as a natural gift; and we find individoals, nad even nations, that have peculiar talents for it; but atill it is an art, and payy be learned like every other art, sud from its value and intportance it is entitled to mach more attention than is usually lestowed opon it. Let a man have read, thought, studied at mnch as he may,
r.arely will he reach his possible advantage as a reody rarely will he reach his possible advantage as a reod
man, nnless he has exercised his powers much in $C$ The ancieut philosophers were masters of the art of $C$ to their disciples. Ronsseau justly remarks that the to their disciples. Rousseau justly remarks that the tune of good $C$ is beither dusi nor frivolous, it is flnent and natural; scosible. without being pedantic;
cheerfin, without being loaisterons; elegant, withont heing affected; polite withont being insipid; find jucose, without heing equivocal. It deals not in dissertations or epigrams: conforms to the demands of good taste, without being bound hy rule; unites wit and reason, satire and compliment, without departing from the rules of a pure morality, and allows all to epeak on
snljecte which they nuderstand. Each expresses his opinion, and suppurts it in as fow worda is possible ; and his owo with obstinacy. All impart information and his owo with obstinacy. All impart information, aod more easy to indicate what things are tole awoided than more easy to indicate what tuings are tole avoided than of $C$ is tonffrit entertainment or agreenble information: and one of its first rules is to allow everyboly to contribute lis share, while every one nt the sume time
ought to exert himself for the gratification of the ought to exert himself for the gratification of the
company. Egotism, ur aoy display of self-conceit, is the
very bane of C., and is carefully to be avoided, na is alsn compars in purration. Adhut yourself lo yonr (ivod mente und goonl ferliog rluould gaide in the selec tich of topics tor 's. and prevent the introtuction of caljects that may not he ngrevabler to tho company. The great urt of $\mathcal{C}$ is to kerpit constantly flowing, und to sidec upon pints wluch cin turn it into new channels It is mach to be regryted that un art wheli woppies buch an imprortant phace among the arconglishments of social life, is yot so moch neglected us it is in many can lie employed in the intellectual training of chaldred and yot it in enturely waglected in most schools.
Converatitionimi, $\alpha$. Pertaining to converwation : dume in mutual dhemise ar talk ; $n$ s, 1 l comarrational gilt. Convermationalial. $n$. Onve who convems a a con-
verser, specifically, one who jructises the art of coover-

Conversa'tionisin, n. A word or expression userl in
-The art of converantion.
 contradistinction to cantemplatuve.

Findiog him litite atudious and contemplative, the chose to onversazione, (lon-rí-sit-tsi-u'nci, $n$. [It.] A mectlug assembled for cooversation, generally on literary onverse

applied to a society formed among the iodustrial classes that the liaburer dues purpose. The prevailing belief capitalist, - thast the latter oldains all the pot for the labior - bss led to the pstural cunclusiop profit of his coold work for himself, if he could surply capital he well as labor, then the whole of the protit would be his own. This las led, chiefly in France and Englund, to the formatwon of societies umong the workiag-chasses where, by each contribeting a small sum to the general find, they have oltataed capital for the purpose of embarking in some coommercial undertaking, the profits of which being afterwarils divided anonj them, or going to increase their capital und enlarge the splere of their operutions. Thus, instead of potting their savinge iuto a losak, oc investing them in ether securities ployed ly others, wha must lest, - as the capital is emsployed ly others, who must have their profit out of it, they empley it for themselves, sud thas obtain the vism, socinlism, or any other fanciful ocheme of civi society. It is simply a joint-stock connpany, carty ing on come comasercial enterprise. "The furm of aktociation," says J. S Slill, "which, if monkiad ceotiune to mprose, must be expected in the ead to predoninate, is not that which can exist between a capitaliot as chief and work-people without a voice io the minnagement but the associntion of the laborers thensehes un terms of equality, collectively owning the rapital with which hers elected and reporalioos, and working under mangers elected and remorable by themselves. There is a kind which is pucet anow betini in the nimsser of nanwhich it is aspraled to in the name of sune occasions on elevated sentament." The system of co-up gratian is one of great benefit to the working-clseses, if properly one fied sut. It fostere provident babita, and epenifrar industry. Each individual is as enuch as ever dependent npua his own exertione, which are almo more buitubly rewarded. It leads, also, to strict inquiry into the moral character of suchas are desirous of adenission into thei society. C. S. are freguently formed in Earope, and of late in this country, for sulplying its members and oth ers with articles of daily comsomjtion. The goods are purchased with the moncy of the society, and obld at the ordinary market-rate, the profit being periodicully divid-
ed among the members, ur guing to in Such societips are very useful in to increase the capital of adulternting cubmodities, which we are told provevile to so serious as extent among tuany shope told jrevail cially those whose busiacss lies chiefly with working of honesty the denfers are alan the buyers. the intereste of honesty are thas on the side of the shop, and the motives of adulteration are eliminsted. No man would willingly sell himself inferior. disenimed, or man hole nome commodities. Down to this day (1882) the cn operative systeon has not been received wath marked
favor in the U . States favor in the U. Statee. Msny co-operative storeq have been exfablishet in almost all parts of the comntry ecems to be better understnod, relatively few of the have met with dectded aud durable success. Co-op'erafor, $n$. One who cobterates.

## MAP OF NORTH AMERICA.

North America, one of the great land masses of the globe, mly exceeded in area by Asia and Afriea, extends from the narrow istlimus of Panama, by which it is united to South America, northward toward the Pole. The continental portion terminates by the Boothia Peninsula at latitude $71^{\circ} 50^{\prime} \mathrm{N}$, and an extensive arehipelago extends thence to an unknown distance mearer the Pole. The total length from Panama to Boothia Point is 5,200 miles. The continent extends from Cape Charles, in longitude $55^{\circ} 30^{\prime} \mathrm{W}$, to Alaska Peninsula, $163^{\circ} \mathrm{W}$, a distance of about 4,350 milea. On the eastern side adjoin immense insular exten-
sions--West Indies, Newfoundland, Greenland, Iceland, \&c., the Iatte reaching to the 13 th meridian of $\mathrm{W}^{+}$longitude. The area of this immense continent can only be roughly estimated, probably about $8,000,000$ square miles, or more than twice that of Europe, or more than ${ }_{6}^{1}$ th of the eutire land of the globe. Population extrenely sparse, showing an average of $7 \frac{1}{3}$ persons per synare mile.

Scale of Map 380 miles to an inch, one square inch eomprising 17 i times the area represented by one syuare inch of Map of England.

Corintiriunw, (Eplsties to THE.) (Eccl. Hist.) Two epistles of the apostle Panl aldresed to the Church of Corinth, and forming part of the canomical writings of the New Testament. Is order clasly to couprehen the scope of these epistles, it is mureaxiry to glance a the circumstances of the people to whom they ware ad dressed. Christianity was first planted at Corinth oy the apostle Punl himself during a rosidence there of departura froma Carinth, Apollos, an eloyuent man anul maghty in the Swiptures, came nnd premed the gosper there with great succesa, - watering what the apostle had plamted. Orber teschers of Christmaity also vame among them, aml the Church came to be divided into different sects, - some declaring for Panl, others for Apollos, some for Cephas, asid some for Christ. The converts, too, were partly Jews and partly Gentiles; the former coatending strenurasty for the cbsarvance of Jewish ceremonies, the latter giving way to the idhla-
trons and lascivions practices of the hethenx. When trons and lascivious practices of the heathenx. When the apostle Panl recemwa monmation of this state of m.tters, he wrote to them his First Epistle, the contents
of which naturally tivite themselves into two distinct parts - the one heing intendenl to remedy the disorders ant abus is thet had crept into the Clurch, the other being ia reply to certain questions wbich the Church bal atb nittel to him for his decision ; ns, cunceroing mutrimnoy, concerning the lawfulawse of catimg things sacribic-d to idols, and tonching the resurrection of the deul. This epistle priducel rery different effects in the Churvh. Matuy were ted to amend their conduct, ind to greiter risilabse and xal ascinst the errors into Which they had fallen; while other; were led to cast impotitfions upon the apostle, and to accuse him of levity, pride, arrogince, and of being persumaily cootemptible. d-fen 1 himself against these ingputations. He ealarges on his spiritual office, enamerates his sufferings and disaters, recounts bis labors, and details bis successes The great oratorical power of this epistle has always been much udraired. The former of these epistles is generally believed to have been written about A. D. 57,
the latter about 5 S . The authenticity of either bas scarcely ever been questioned; but much disenssion has arisen as to whether tbe apostle bad adiressed to the church at Corinth an e rriier epistle than eithir of these, refred to in sir. there was no othor epistle, maintain that the reference多 the one he was then writing.
oriolanns. Cuus Muscos. a celebrated legendary War with the Vulscians, the Komans besieging Corioli, the capit.tl of the Folsciana, being driven back to their lines, Murcias rallied his conntrymen, purshed the enemy, and possessed himself of Corioli; for which h. Whs rewaried with a large share of the spoil, and with the sarnanis of Griotañus. Sabsequently. is dispates which took place hetween the putricins and the plebcians, $491 \mathrm{k} . \mathrm{C}, \mathrm{C}$. mude himself so obnwsions to the latthe that he was basbised. Stuog by the ingratitude of his conntrymen, he juined the Volscians, and jointly
with Tallus Aufius led a numorons army against R mine. He hid encamped within 5 m . of the city, and its rain seemed inevitible, when, at the urgeat entreasties of his mother, Volumnia, be withdrew lis army. The traditions differ as to liss end; according to some he w.s assas-inated, according to others he went into exile and lived long among the Felscians.
Co'rinm, $n$. [Lat.] (MiC.) A kinlof tholy-armor, formed of leathero scales placed in tilefashion ono above the ot'ler; worn by Romun and (anthic aoldiers, sc.
(Anat.) The basis of the shin, or true shin, of
of a vascular asis fituro-cellular or trusue, of intiriaced dense, but elastic filaments. It rests on the subcutade aas, cellalar tissne, and is covered by the caticle or Co-ri'val, $n$. A competitor; a fellow-rival.
cr. $u$. To rival another; to assume eqnality with.
Co-ri'valry, Co-ri'valshijn, $n$. Fellow-rivalry,
Cork, and spongy bark of a species of onk (Quercus subu) Lion.), abandant in the dry, momntainoos districts in: the s. of France, and in Spant, Portngal, Italy, and Algria. The tree grows to the height of 30 feet or evergreen oak, and attans a groat age. Antor arrivinit at a certuin state of maturity. It acriodically sheds its much better quality whon it is artificially removed from the tree, which may be effected without aoy injury to 20 to 30 Sears, it may be barked; and the operation
may be sulsequantly repentel onen every 8 or 10 yeara the quality of the C. improving with the increasing mg of the tree. The birk is taken of indny and Angust
and the trees that ure robularly ofriphed are anid t live fur 1 to years or more. $C$ is lisht, porous, rendily compressible, ant womberfolly clastic. It may be cut into any sort of figure, mad notwith-tanding ito porosity,
is nearly impervious to any commun liquor. These

Corocore, $n$. A boat used in the Indign beas,
Cor'ol, n. A corolla.
Corol la, n. [Lat, corolla; dim. of corma, a crown; Fr sisting of leafy organas called petals, and situated, in complete flower, betweon the calyx and the stamens. I is generally the most conspicuons whurl of organs, being more or less culored. It is, in fact, that part of the plan Which usually delights us most by its gay appearance sianally this color is met with, as ia some folfocas, in Higy viridiflora, Gonotobus viridiflorus, nod P-ntatro pis rpiralis. Wheo there is lut ope whorl of enveloping organs io the fluwner, it is regarded as the caly (which see), sal tho flower is ssist to be apofuloid. petal is often darrowed below idto a stalk-like partion anulagous to the petiole of a leaf, ne in the wall-fluwer the narrowed portion is then termed the unguis or clac and the expanted purtion the firmb. Such a petul is sai to be vnguaculute or clawed. The shapes of petals ar dersturat : snch as oblong, lancodute, pliplic, orlicular
 ubular, and hoat-ahupred, spplied to the forms of pontul which are nut flat. In describing their direction, th terms ereft, comnirent, dieergent, and reffraent, we usand in the same sense as when upplied to the parts of the calyx. The petats, liko the scprals, may be either dis tinct. or mare or lese united into one borly. In the for mer cuse, the C: is xuid to be polypetatones or dialyprtaltous; in the latter, moneqetatous or gumopetalous. The Bumber of petals in a polypptalone $f$ : is indicated ly a prefix petals is sadd to lee dipetalaus; of three, trupetalous? of four, telrapetalous, nnd so on. When the petals aro all of the shine size and form, the $C$ is terosed regular When they vary in these partiralars, it is cail to be ir rogular. We give brlu
the rogalar polypetalons re:-Cruciform,-
consisting of fonr pitals, neaally with clawn, as in the wall-flower of the petale are turned int manotimes withent claws, ns in the Crlindine, and the whale arnunged in the form of a ous,-crusinting of तिve jutala with long claw
inclosed in the tule of the calyx, and wit
 thireith cumenonly to the clows, as in the to the clawn, tu in the I.yclanin, Singlo piak, Carnation, withuut, or with very nhort clawn, and epronting io it regolar mamer, an in tho strawh, andery and simelo rose: There are many athmalous formo of the irregnher puls

 the Thpitionarrous. (Figs, Gih). Thin lerives its mome from thin fanctid revemblawe which it heara to a luttertly (pupilios). It is romponiol of flye protale, one of which in soperivir and largir than that othera, anit in

Corpera'liont, $n$. [Fr.; Lat, corporatio, from corpus.] A body pulitic or incorporate, so called ad the perbuns are mude into a body, and of capacity to cake ond graut, dc; ; or it is an assembiy and jorning together one is head and chitf, and the rent aro the tuody, und this bead aud body knit together make tho corporation ; ulso, it in constitoted of several members, like unto the aatural body, and framed by fiction of law to eadure in per pefual surcession. The essential character of a $C$. is that it has a legat existebce as a person, nuder the name givea to it by legislative uuthority, "ither by express charter, or by prescription, which implies a charter. Or corporations, some ars sule, somo aggregute: sole,
when ia one single person, as a hishop, dean, parson, when in one single person, as a hishop, dean, parson,
vicar, or the like; aggrgate, which is most usua, coasisting of numy persons, as mayor and communalty, dean und chapter, \&c. Likewise, corporatious are spiritual or tempural': spirituat, as bishops, deans, archdeacons, parsuds, vicars, and other occlesiastical persons; temporal, as mayors, aldermen, \&c., of towns and boroughs. Lay corporatioas are of two surts, - ciril and dermosynary. The civil are such as are erected for a variety of temporal purposes, as a mayor or commouulty, or the like, for the good government of a towa: others, for the advaucemeot and regulation of conmerce,
as bankiug, insursace, mannfacturing, \&c.; and others, as bankiug, insursace, mannfacturing, \&c. ; and others,
for the better carrying oo of divers special purposes, as for the better carrying on of divers special purposes, as
colleges, academies, \&c. Elcemosynary are such as are constitated for the perpetuat distribution of the free alms or lwunty of the founder to such peroons as be has dior ected, or its the mode of goverament has been defiaed Of this kiad ure all hospitals for the maiatenance of the poor, sick, and impotent, and all colleges. Corporations, both sole and agyregate, may parchase, take, and hohi laad to them and their successors, as natural persons may hold then nad their heirs. Bnt aggremste corporations, when of the eleemosynary, or ecclesiastical, or musicipal kind, and corporations sole, arc in general restrained by statute from alienation of their lands, beyond the life of the person who constitutce the C. sole, less given to them, in some casce, to grant long luild less given to them, Corporations aggremate may sue and be sned nill do all other acts, by their corpurate patne. Their corporate property only, and not the members iadisidu ally, is amenable to julgments given asainst them Their acts are under theil commion seal. There is perhape not one conntry in the world where corporations are so numerons and so diversified us they are in America. The most important of them will be found in this work under their proper names.
A caat term for the buman stomach and belly; as, that man carries a large corporation. (Eng.) - Vilgarly applicd, also, to men who run as caadidntes for the office of (0r'pora

Cosmetie. (har-mct'ik,) n. [Fr. cosmélique: Gr. Insmen, 1 adorn.] (Hygiene.) A preparation applied externally fur the purpnse of presurving the bloom and beanty of youth: or for restoring those nttractions when lost, or in the process of decty. From the time of Medea, when she reatured the hent anil wrinklid form of Jason's father horul, all wions luve mure or lessedabled in the mart of revivifying ngo and retaining the freshucss of yuuth. thit that they have never sneceeded is proved by the if succoss that wtill marke the practice; for, as the chief articl.n used for the purpose are derived from the minern! kinglom, the binefal convequences that follow thair use liecome a pumixhment to the fagorance or vinity of those who shopt them. Among the urticted mowt used are beal, uercury, bismuth, uhtimouy, shil arsenic. Prarl puover, that connusund which netremsers und lafiex of foslitun use ao extensively to give a lilooming conplexion to the weck and face, is prepared with biemulh juwder, or whito oxide, and French ehalis, with whitencess: it is untually put on as a liquid compuat, and the haly has to wit for monne time hefore her conuplextou in alry ewough to pormit the after-tonches of roure, and ather plemente, to intensify the esclushen and berme. Froun the nhmorlang ant "vhaling propertier of the sklin. the "xtreme humer of thas hitw kine up the porse of the most ronsitive part of the lanly's nnerfare will he evident

 the stourlnonts taku up the miueral from the citicle and
carry it tos thenytom, whare it in certain, ponener or later, to alew its intlimence ou the nervona organicultom,
by a partinl paralysis of the eyelide, or the corner of the month. Nor is this the only danger. The skin is mate
 paint by day as well as by nitht, to etmble her to meet paint by day as well as by mitht, to emme her to moct
the pablic gaze. A little of this injurions effect may be prevented. by first covering the face and breast with lard or cold crean, when, after having filled up sht the pures by this means, and wiped the skin, the wash of peart powder may be painted in. There nre certain strong odors nad gases which the painted lady must carefulty avoid coming io contact with, or she may discover her pearly blow in a few suconds converted into n leaden mask or a negro's darkuess. Sulpharetted hydrugen, or sulphur in any form, or the cating or the
smell of onions, are two of the cruses which prodnce this effect. Nearly all the washes nsed so trequently, this effect. Nearly all the washes nsed 80 trequently,
neder the names of Kalydor, Circassian Cream, Milk of
Roses, \&c., and which are, though iojorims, the least burtful of cestoetics, are geoerally prequred by beating dowo bitter almotids with rose- or elder-flower water, and adding from 1 to 2 grains of corrosive sublimate to each ounce of liquid. -sweet almonds, Castile soap, and spermaceti being mere addenda; - almond oil, canstic putash, essential oil of almonds as a purlume, and water, being by sotue used to make it cosmetic cream. Eiderflower water is nomong the must serviceable of all the Washes for the face, rud when used to remove frecklez,
with 1 srain of corroaive soblimate added to each four onnces, a lotion of considerable ntility is produced, which may be employed 2 or 3 times a day with good results. Those ladies, huwever, who wish to preserve their good lonks the longest, will trnst rather to a happy, checrful mind, a little constitntional aperient, the use of the lath, and simple elder-dower water as a lotion for the face, than resort to the deudly properties of such mineral cosmetics, as those already emmerited.

(Phrlos.) If we accept the $C$. of the Hindoos, the earliest extant is that of Hesiod, which is delivered in bexthe early Ionic philosophers, of whont Thales, Anasimenes, Abaximasoder, and A naxagoras are the most celehrated. We da not include in this list the researches of modera geologiste, or the systens to which they have led. They may be said to hold the same place io rela tion to the old cosmogonists, which the astrunomer or the chemist occupies in reference to the astrologers and alchemists of aacieut times. The different theories which have been formed to account for the origin of the world may be comprehended noder 3 classes: lnt. Those which suppose the worlh to have existed from etoroity ander its actaal form. Aristutle embraced this doctrige. and conceiving the existing noiver6e to be the eternal beavens and the earth thit all samate and inanimat beavens aad the earth, but all athimate and manmate beings are withont laginning. 2d. Those which con
sider the matter of the moiverse eternal, lut ont its form. This was the philesophical systeat of Lensippnes, Demucritus, Epienrns, and indeed most of the ancient philosophers and poets, who imagined the world either to be prodaced by the fortuitons conconrse of atoms existiag froto all eternity, or to have sprung ont of the chautic form which preceded its present state. $3 d$. Those which ascribe both matter and its furin to the di-
rect agency of a spiritual caone

The forage of the planter is derived from corn-stalks, out hupore numbrity and henct, thrmghont the region, wr fatd no herdat stuck-raising profitabla (Mr. Foetcr's Mississithti 'Iat stock, 1 1 69.." (o, when raised within the truat-1ine must always the phintent, it funsaible, ufter the lant trost in suring, as it is more easly killed by cold than mny other plant; and when onece bitten by front it cammot racover like corn, but anst lue re-plantel. Before planting, the groum nust be moken dewply and thoroughty. Thas abould be doae in Febrana of March, for phatations in
 sis; in Junthry, for plantations in Florida, Missiesipui, Lemisiana, or Yexak. We can, of comrt, only getur nifze in an article so brief ast this must bo; himt it win knowlalige of, bama diar or beogs like those of yissiveiphi Lonixiana, Texis, \&c The next step in the procese, ate have ing broken the ground well, and permilted it to lie thas for a few wecks, is to "bed up" the ground, ne the plant ers plarase it, for pitting in thr seed. The rows are laid off from 3 to $\&$ feet apart in the thinner lands, from three to seven feet in the rich mands of Louisiam anu fexus- win a narrow-bladed plongh-gencrilly with a scooter. The fertilizer is now drupped in the furrow, Bhd a rigge, or bed, made uponit with curning plouph. One shmedromely nule. prevext and lust step in the process is to upen the ridise with a scouter, drop iu the seeds, and cover them. The covering is rapidly and well effected by a hoarikerewed to the hetve of a scoeter. The buard bloould be long enongh to extend acrose the cotton-row, and have a scoop. or groove, ent in the centro of corresponaing to the dised. The seed ehould be rubbed or rolled in wrot asher just previous to platating, to destroy the ndluesion of the cotton fibre that will remain with the seeds of uphand C. aftre the very best giming now kuown to phanters. The senIsland $C$ or, as ing-staple, nay be dropped withent this rolling in nabers; as, when it in ginnthl, or picked from the seend by hand, very little lint is left en the reeds. After it shall have sprong from the gronnd to the height of abt two inches, it is "chopped out" with in hoe. Two or 3 stalhs are all that should lee left in one spot to grow accorling to the or hills, ehtould the soil. Of conrse the grass, the great enemy of all plaits, nud specially of munst le cut out when this chapping is perfurmed. Io 8 to 10 dajs after the chopping the plant must be howd or have dirt thrown gently around the tunder stalk with a plol foll be wain ploughed, $n \mathrm{ml}$ carefunty cleancd or un grass must be given, and yuu have littleeke to do with it sus to keep the arass ont, specially now from the middles for if weeds and grass grow there, they will give to the pickery a very troublesome crop of secds and dry in the fall and winter. C.must net be plonghed when the ground is vary wet, - The pocking is gentrally dooe liy hand, nud should be commenced in July or August, a 6oon as the matured C. is well open, One hand can piek from 100 to 200 , and even 300 his. per day, muder very
farorahle circumstances. But it is to be hoped that "Howne cotton-picker," or some other ingeniou mas Howes cotton-packer, or is destined speedily to lighten this most tireseme picked before the is preparco for market. The it and the October frosts turned it yellow, is the best; nod must be ginned and packed by itself, to command the brst price in market. lot will be depreciated in consequence.- After lawing been picked, Ce. is spread ont and dried, and then suparated frons the seeds. The latter process was furmerly performed by hand - a fedi-
ous operation, ly which one hand conld clean only a pounil or sonday ; - bnt since the invent gin, by Eli Whitney, in 1793 , the process of cleaning compused of a hopper having one eida formed of atrons parallel wires, placed so close together as to exclnde the passage of the seeds from within. The wool is dragged throngh the apertures by meaos of circular saws at thebed to a large roller, and made to revolve between This process is adopted only in cleaning the short-sta
